

CDMA HOSPITALITY PLAYBOOK

A Comprehensive Guide to CDMA's Managed IT &
Cybersecurity Services for Hospitality Organisations

MAY 2025 EDITION

INTRODUCTION

Hospitality Never Sleeps.

Your guests expect seamless connectivity, instant service, and zero downtime — 24 hours a day, 365 days a year. Behind every smooth check-in, reliable guest Wi-Fi connection, and flawless point-of-sale transaction sits a complex IT infrastructure that demands constant attention.

This playbook has been created specifically for hospitality organisations and the Managed Service Providers (MSPs) who support them. It explores CDMA's full suite of services in the context of hotel groups, resorts, boutique properties, and hospitality venues — explaining how our NOC, Service Desk, cybersecurity, network architecture, and project capabilities address the unique demands of this fast-moving industry.

Whether you manage a single property or a portfolio spanning multiple countries, CDMA provides the always-on IT backbone that hospitality demands — from guest Wi-Fi and captive portal design to Mobile DAS, backup and disaster recovery, and 24/7 managed detection and response.

All CDMA services are delivered on a white-label basis. From your guests' and staff's perspective, we operate as a seamless extension of your own IT team.

Why Hospitality Needs 24/7 IT Support

01

Always-on operations, peak season pressure, guest-facing systems

Hospitality operates around the clock. A server crash at 2 AM during peak season does not wait for business hours. A Wi-Fi outage in a 300-room resort triggers hundreds of guest complaints within minutes. In hospitality, IT is not back-office — it is the guest experience.

The Hospitality IT Challenge

- **Always-On Operations**
Hotels, resorts, and venues operate 24/7/365. Front desk check-ins happen at midnight. Room service flows through POS systems at 3 AM. Housekeeping relies on mobile devices. Any downtime directly impacts the guest experience and revenue.
- **Peak Season Pressure**
Occupancy surges place enormous strain on networks, PMS systems, and payment processing. Seasonal peaks bring 2–4 devices per guest requiring high-density Wi-Fi. The worst time for an IT failure is precisely when it is most likely to occur.
- **Complex Vendor Ecosystem**
Hospitality IT involves PMS providers (Opera, Mews, Protel), POS systems (Micros, Lightspeed), IPTV, door lock systems, CCTV, and VoIP. Coordinating between them requires deep domain knowledge.
- **Staff Turnover**
Hospitality has one of the highest staff turnover rates of any industry. Seasonal hiring means constant onboarding and offboarding of accounts, devices, and credentials — creating operational overhead and security risk.
- **Payment & Privacy Compliance**
PCI DSS and GDPR are non-negotiable. Guest databases contain PII, payment systems process card transactions continuously, and strict network segmentation must be maintained at all times.
- **Mobile Coverage Gaps**
Thick walls, basements, and large conference areas create signal dead zones that frustrate guests and hinder staff. Comprehensive 4G/5G coverage (DAS) is an increasingly expected amenity.

The bottom line: Hospitality IT demands proactive 24/7 monitoring and rapid incident response. Reactive support is not an option when guest satisfaction and revenue are on the line.

Hospitality Systems We Help Protect

System	Key Platforms	Why It Matters
Property Management System (PMS)	Opera, Mews, Protel, Hotelogix	Reservations, check-in/out, billing, housekeeping — the heart of operations
Point of Sale (POS)	Micros, Lightspeed, Toast	Restaurant, bar, and room-service transactions. Must be available 24/7
Guest Wi-Fi	Aruba, Cisco Meraki, Ubiquiti	The single most common guest complaint when it fails. Non-negotiable.
VoIP & Telephony	Teams Phone, Cisco, Avaya	Guest-room phones and reception lines. Downtime means missed bookings
Digital Key & Smart Locks	Assa Abloy, Dormakaba	Keyless entry requires constant connectivity between locks and PMS
CCTV & Access Control	Hikvision, Axis, Genetec	Critical for guest safety and regulatory compliance
Booking Engines & OTAs	Booking.com, Expedia, SiteMinder	Real-time inventory sync. A failure can cause overbookings or lost revenue
IPTV & Digital Signage	Samsung LYNK, LG Pro:Centric	In-room entertainment and lobby displays require constant monitoring

CDMA SERVICES OVERVIEW

02

Three pillars: Resilient Infrastructure, Secure Operations, Hotel-Grade Productivity

CDMA provides a comprehensive suite of managed IT and cybersecurity services structured around three integrated pillars designed specifically for hospitality. All services are delivered white-label — your clients never know we exist.

Three Integrated Pillars

- Resilient Infrastructure

SD-WAN with automatic failover, Wi-Fi 6/6E high-density networks, enterprise LAN switching with secure VLAN segmentation, and full isolation of guest, PMS, IoT, and admin networks. Your critical systems are always available and performing optimally.
- Secure Operations

24/7 network monitoring and MDR/SOC services, advanced endpoint protection and threat detection, continuous vulnerability management, and automated backup and disaster recovery. Your data, guests, and property are protected around the clock.
- Hotel-Grade Productivity

PMS/POS system continuity and monitoring, Teams Phone and VoIP support, IPTV and digital signage management, conference AV, and guest application support. Staff are empowered; guests enjoy superior connectivity.

Key Services at a Glance

Service	What It Does	Primary Hospitality Benefit
NOC (24/7)	Proactive monitoring, maintenance, and remediation of servers, network devices, and endpoints	Guest Wi-Fi uptime, PMS/POS reliability, peak-season readiness
Service Desk (24/7)	First-contact technical support for hotel staff via phone and email (white-label)	Fast resolution, seasonal staff onboarding, minimal guest disruption

Service	What It Does	Primary Hospitality Benefit
Guest Wi-Fi & Captive Portal	Wi-Fi 6/6E high-density wireless, branded portal, PMS integration, analytics	Superior connectivity, conference revenue, marketing data capture
Cybersecurity / MDR	24/7 SOC, EDR, SIEM, next-gen firewall, threat isolation in 15 minutes	Ransomware protection, PCI DSS and GDPR compliance support
Mobile DAS	Nextivity-powered 4G/5G distributed antenna systems	Ubiquitous cellular coverage for guests and staff throughout property
Backup & DR	Immutable backups with 15-min RPO, offsite replication, tested DR runbooks	Rapid recovery from ransomware, hardware failure, or natural disaster
Deep Dive Assessment	RMM platform audit and optimisation, alert tuning for hospitality	Reduced noise, better visibility, hospitality-aligned maintenance windows
Project Services	New openings, SD-WAN, Wi-Fi 6/6E, migrations, network redesigns	On-time delivery, zero guest disruption, documented procedures

Hospitality Network Architecture

03

SD-WAN, VLAN segmentation, access control, SIEM monitoring layers

A properly segmented network protects guest data, ensures PCI compliance, and maintains performance across all property systems simultaneously. CDMA designs, deploys, and manages enterprise-grade network architectures tailored to the specific demands of hospitality operations.

Micro-segmentation principle: A compromised guest device must never be able to reach payment systems or property management infrastructure. This is enforced at the VLAN level — not just firewall rules — for true defence in depth.

Five-Layer Architecture

01 Internet & SD-WAN Layer

Dual-ISP failover with intelligent traffic routing ensures continuous connectivity even during provider outages. LTE/5G backup ensures VoIP reception can always take reservations even during primary internet failures.

02 Core Security & Switching

Next-generation firewall with application awareness and intrusion prevention creates secure network boundaries with deep packet inspection. Managed core switches provide the backbone for all VLAN segregation.

03 VLAN Segmentation

Minimum six isolated VLANs: Guest Wi-Fi, Staff/Administration, PMS/POS (PCI-scoped), CCTV, IPTV, IoT devices, and Management. Payment systems sit in their own PCI-scoped segment with no lateral access.

04 Access Control & Captive Portal

Branded captive portal with RADIUS authentication. Guests are automatically provisioned access at check-in and removed at check-out via PMS integration. Voucher codes and time-limited access support conference guests.

05 Monitoring & Logging (SIEM)

A SIEM platform collects security events, traffic patterns, and system health metrics for 24/7 threat detection. Anomaly detection identifies suspicious behaviour in real time.

What CDMA Deploys in Hospitality Networks

Technology	Details
SD-WAN	Intelligent dual-ISP failover with automatic traffic rerouting and LTE/5G backup
Wi-Fi 6/6E	High-density APs with seamless roaming, per-room bandwidth management, channel optimisation
Enterprise LAN	Managed switching with VLAN tagging, QoS prioritisation for PMS/POS, redundant uplinks
VLAN Segmentation	Six+ isolated segments: Guest, Staff, PMS/POS (PCI), CCTV, IPTV, IoT, Management
Next-Gen Firewall	Deep packet inspection, application awareness, intrusion prevention, web filtering
RADIUS & Captive Portal	Centralised authentication with PMS integration, marketing analytics, voucher codes

NOC for Hospitality

04

Proactive monitoring, incident response, coverage tiers, certifications

Our Network Operations Centre provides 24/7 proactive monitoring, management, and remediation of your hospitality IT infrastructure — keeping guest-facing and back-office systems running without interruption.

How Does It Work?

We monitor your infrastructure using your existing RMM platform or our own SaaS-based monitoring agents. Our NOC team analyses alerts, takes corrective action, and escalates to you only when necessary.

Why It Matters in Hospitality

A failed firewall at a resort can take down guest Wi-Fi, POS terminals, and door lock controllers simultaneously. Proactive monitoring catches degradation before it becomes a guest-impacting outage.

What We Monitor

- Guest Wi-Fi access points, controllers, and uptime
- VoIP system connectivity and call routing
- PMS/POS system availability and response times
- Server CPU, memory, disk utilisation, and health
- Firewall and network device status and performance
- Internet connectivity and SD-WAN failover events
- Backup job success and failure with alerting
- Endpoint agent status and patch compliance
- CCTV and access control system connectivity
- UPS and power monitoring for critical equipment

NOC Service Tiers

Tier	Coverage	Response Time	Scope
Essential	24/7 monitoring	Alerts within 15 min	Core infrastructure monitoring and alerting
Standard	24/7 monitoring + remediation	Incident response within 30 minutes	Monitoring, remediation, monthly reports
Premium	24/7 monitoring + remediation + proactive management	Priority within 15 minutes	Full proactive management, quarterly reviews, dedicated engineer

Certifications & Tooling

- ISO 27001:2022 certified — information security management across all service delivery
- Compatible with all leading RMM platforms: ConnectWise, Datto, NinjaRMM, Atera
- ITSM ticketing fully integrated for SLA tracking and reporting
- Dedicated hospitality playbooks for PMS/POS maintenance windows

Service Desk for Hospitality Teams

05

End-user support, user account management, vendor coordination

CDMA's white-label Service Desk provides 24/7 first-contact technical support for hotel staff, ensuring that IT issues are resolved quickly and professionally — with your branding, not ours.

Service Desk Capabilities

- **24/7 Availability**
Round-the-clock support via phone and email. Staff can reach us at 3 AM when a check-in system fails during peak arrival.
- **White-Label Operation**
We answer in your name. Guests and staff experience seamless support under your brand identity.
- **Seasonal Onboarding**
Rapid account provisioning and device setup for seasonal staff. Offboarding at season end to maintain security hygiene.
- **Vendor Coordination**
We liaise with PMS, POS, IPTV, and other vendors on your behalf — eliminating the time lost coordinating between multiple suppliers.
- **Ticket Management**
Full ITSM ticketing with SLA tracking, escalation paths, and detailed reporting on resolution times and recurring issues.
- **Remote & On-Site**
Remote-first resolution with on-site dispatch capability for issues that cannot be resolved remotely.

Common Hospitality Service Desk Requests

- Guest Wi-Fi connection issues and captive portal troubleshooting
- Staff account creation, password resets, and access rights
- PMS/POS connectivity and application support

- Printer, scanner, and peripheral device issues
- Email and Microsoft 365 support for hotel management
- VoIP and Teams Phone configuration and troubleshooting
- New device setup and configuration
- Software installation and licensing management

Service Desk Performance Metrics

Metric	Target (Standard)	Target (Premium)
First Contact Resolution Rate	> 70%	> 80%
P1 Acknowledgement	Within 15 minutes	Within 5 minutes
P2 Response	Within 1 hour	Within 30 minutes
P3 Resolution	Within 4 hours	Within 2 hours
Customer Satisfaction (CSAT)	> 90%	> 95%
Monthly Reporting	Standard summary	Executive dashboard

Guest Wi-Fi & Captive Portal

06

Wi-Fi 6/6E design, branded portal, network analytics, conference revenue

Guest Wi-Fi is the most visible IT service in any hospitality property. CDMA designs, deploys, and manages enterprise-grade Wi-Fi infrastructure that delivers exceptional connectivity for guests while protecting property operations.

Wi-Fi 6/6E Design Principles

- **High-Density Coverage**
Purpose-designed access point placement for high-density environments including conference halls, pool areas, and guest rooms. Every square metre covered.
- **Seamless Roaming**
Guests move freely throughout the property without reconnecting. 802.11r fast transition ensures uninterrupted VoIP and streaming.
- **Per-Room Bandwidth Management**
Intelligent QoS policies ensure fair bandwidth allocation. Premium guests can receive elevated allocations without manual configuration.
- **Network Analytics**
Real-time visibility into device counts, bandwidth consumption, and signal quality. Data feeds marketing insights about guest behaviour patterns.

Captive Portal Features

- Fully branded portal with hotel logo, colours, and messaging
- PMS integration — automatic guest access at check-in, revoked at check-out
- Tiered access: complimentary basic, premium paid tiers for high-bandwidth guests
- Conference and event voucher codes with time-limited and bandwidth-limited access
- Marketing consent capture integrated with CRM systems
- Multi-language support for international guests

- GDPR-compliant data handling and retention policies
- Analytics dashboard: session counts, peak usage times, device types

Revenue opportunity: Conference and events Wi-Fi can generate significant additional income through tiered access packages. CDMA can design and implement monetisation models for event spaces.

Wi-Fi Infrastructure Summary

Component	Specification	Benefit
Access Points	Wi-Fi 6/6E (802.11ax/be), MU-MIMO, OFDMA	More devices, faster speeds, less interference
Controllers	Cloud or on-prem (Aruba, Cisco, Meraki, Ubiquiti)	Centralised management, remote troubleshooting
Roaming	802.11r/k/v fast BSS transition	Seamless handoffs across APs during movement
QoS	Per-SSID bandwidth policies, application prioritisation	PMS/VoIP prioritised over guest streaming
Monitoring	24/7 NOC visibility, uptime alerts, client analytics	Proactive issue detection before guests complain
Security	WPA3, network isolation, client firewalling	Guest devices cannot reach staff or PMS VLANs

Property Systems Continuity

07

PMS/POS monitoring, IPTV, digital signage, Teams Phone & VoIP

Hotel operations depend on a constellation of interconnected systems. CDMA monitors and manages the full technology stack — from property management and point-of-sale to in-room entertainment and communication platforms.

Systems We Monitor and Support

System	Coverage	Key Risk if Down
PMS (Opera, Mews, Protel)	24/7 uptime monitoring, connectivity assurance, application health	Front desk paralysis, check-in failures, revenue loss
POS (Micros, Lightspeed)	Transaction monitoring, failover support, periodic health checks	Revenue loss, guest frustration at F&B outlets, end-of-day reconciliation failure
IPTV (Samsung LYNK, LG Pro)	Channel availability monitoring, controller restarts, stream health	Guest experience degradation, complaint volumes increase
Digital Signage	Content delivery monitoring, display uptime, scheduling accuracy	Brand and information gaps in lobbies and conference spaces
Teams Phone / VoIP	Call quality monitoring, extension availability, trunk status	Missed reservations, reception downtime, emergency communication failure
Conference AV	Pre-event systems testing, live monitoring during events	Event failures affecting revenue and reputation
Digital Key Systems	API integration health monitoring, lock response times	Guest lockouts, security incidents, brand damage
Booking Engines & OTAs	Channel manager sync monitoring, rate/availability push health	Overbookings, rate parity issues, missed revenue

Maintenance Windows

All scheduled maintenance activities are performed during low-occupancy periods specific to each property. CDMA works with each property to define optimal maintenance windows that minimise guest impact while ensuring systems remain current and secure.

Critical rule: PMS and POS systems are never patched or restarted during check-in/check-out peaks or active F&B service hours. Our hospitality-aware maintenance schedules respect operational realities.

Cybersecurity for Hotels

08

Prevent, Detect & Respond, MDR/SOC, PCI DSS, GDPR alignment

Hotels are high-value targets for cybercriminals. Guest payment data, personal information, and the need for continuous operations make hospitality properties attractive and vulnerable. CDMA's layered security approach addresses every threat vector.

Three Layers of Protection

01 Prevent

Next-generation firewall with application awareness and web filtering. Network micro-segmentation ensuring PCI-scoped POS systems are isolated. Endpoint protection on all managed devices. Vulnerability scanning and patch management to close known attack vectors before they are exploited.

02 Detect

24/7 SIEM monitoring with correlation rules tuned for hospitality environments. Anomaly detection identifying unusual traffic patterns. User behaviour analytics to spot compromised credentials. Threat intelligence feeds updated in real time from global sources.

03 Respond

Managed Detection and Response (MDR) with 15-minute threat isolation SLA. Documented incident response playbooks specific to hospitality. Forensic capability for post-incident investigation. Post-incident reporting with root cause analysis and remediation recommendations.

Compliance Alignment

• PCI DSS

Cardholder data environment scoping, network segmentation validation, quarterly vulnerability scanning, and penetration testing coordination. We help you define, document, and maintain your PCI scope.

• GDPR

Guest personal data handling guidance, breach notification procedures, data processor agreement templates, and privacy impact assessment support for new technology deployments.

- **ISO 27001:2022**
CDMA operates under ISO 27001:2022 certification, ensuring information security management best practices are applied across all service delivery activities.
- **NIS2 / DORA**
Advisory support for hospitality properties and management groups falling under NIS2 obligations or with financial services linkage requiring DORA compliance.

Cybersecurity Services Summary

Service	Description	Coverage
Next-Gen Firewall	Application-aware, IPS, web filtering, SSL inspection	24/7 active
EDR / Endpoint Protection	AI-based threat detection, behavioural analysis, rollback	All managed endpoints
SIEM & Log Management	Centralised event correlation, threat hunting, alerting	24/7 monitoring
MDR / SOC	Human-led threat investigation, 15-min isolation SLA	24/7 response
Vulnerability Management	Authenticated scanning, risk scoring, remediation tracking	Monthly + on-demand
Penetration Testing	External, internal, and Wi-Fi penetration testing	Annual or as required
Phishing Simulation	Staff awareness campaigns, click-rate reporting	Quarterly campaigns
Incident Response	Forensic investigation, containment, recovery	On-demand + retainer

MOBILE DAS SOLUTIONS

09

Nextivity-powered 4G/5G coverage, eliminating dead zones throughout property

Mobile signal dead zones frustrate guests and impede staff communications. CDMA deploys Distributed Antenna Systems (DAS) powered by Nextivity technology to deliver consistent 4G/5G coverage throughout even the most challenging property layouts.

The Challenge

Thick concrete walls, underground car parks, basement conference rooms, and large atrium spaces all create cellular dead zones. Guests complain. Staff cannot receive calls or use mobile applications. Emergency communications may be compromised in areas where signal is weak or absent.

CDMA's Nextivity DAS Solution

- **Carrier-Agnostic Coverage**
Nextivity systems amplify all major carrier signals simultaneously — guests on any network receive improved coverage without carrier partnerships or site licensing complexity.
- **Passive & Active DAS**
We design and install both passive distributed antenna systems for smaller properties and active DAS for large resort complexes or multi-storey hotels.
- **4G & 5G Ready**
Future-proof infrastructure supporting both 4G LTE and 5G NR frequencies, ensuring your investment remains relevant as networks evolve.
- **Professional Survey & Design**
Site RF surveys identify coverage gaps precisely. System design ensures every area — including pool decks, spa, and underground parking — receives adequate signal.
- **Monitoring & Maintenance**
CDMA remotely monitors DAS performance and proactively addresses signal degradation before guests experience issues.

DAS Deployment Summary

Area Type	DAS Type	Typical Coverage Outcome
Guest Rooms (multi-storey)	Passive DAS or active per-floor	-65 to -75 dBm signal strength throughout
Conference & Banquet Halls	Active DAS with distributed antennas	Full carrier coverage across all seating areas
Underground Car Parks	Passive leaky feeder or active	Consistent voice and data coverage at -70 dBm
Spa, Pool, Outdoor Areas	External antennas + internal passive	Coverage extended to all guest amenity areas
Restaurant & Bar Areas	Integrated with building DAS	Strong signal for POS, staff devices, and guests
Back-of-House / Kitchens	Passive extension from main DAS	Staff communications uninterrupted

Backup & Disaster Recovery

10

15-min RPO, immutable backups, documented DR runbooks, tested recovery

A ransomware attack, hardware failure, or natural disaster can bring hospitality operations to a standstill. CDMA's backup and disaster recovery services ensure rapid recovery with documented, tested runbooks — not last-minute improvisation.

Key Recovery Metrics

Metric	CDMA Standard	Why It Matters for Hospitality
Recovery Point Objective (RPO)	15 minutes	Maximum data loss window — only 15 minutes of transactions at risk
Recovery Time Objective (RTO)	Defined per system tier	PMS and POS are prioritised first for restoration
Backup Frequency	Continuous to hourly depending on criticality	Critical systems backed up continuously; others on defined schedules
Retention Period	Configurable — typically 30/90/365 days	Meets regulatory requirements for financial and guest data
Offsite Replication	Encrypted offsite copy always maintained	Site disaster cannot destroy primary and backup simultaneously
Immutability	Write-once backup repositories	Ransomware cannot encrypt or delete backup data
Encryption	AES-256 at rest and in transit	Backup data protected against interception and theft

DR Runbooks

Every managed property has a documented disaster recovery runbook specific to its technology stack. Runbooks cover the following scenarios: ransomware attack, critical hardware failure, ISP outage, site-level disaster (fire, flood), and cloud platform outage.

Runbooks are tested at least annually (more frequently for Premium tier clients). Each test produces a formal report with recovery time measurements, gaps identified, and remediation actions assigned.

Backup Coverage by System

System	Backup Method	RPO	Recovery Priority
PMS Server	Continuous replication + hourly snapshot	15 min	Priority 1 — restore first
POS Systems	Hourly image backup + transaction log	1 hour	Priority 1 — restore first
File & Document Servers	Daily full + hourly incremental	1 hour	Priority 2
Email & Collaboration	Cloud-native backup (M365 third-party)	24 hours	Priority 2
CCTV Footage	Local NVR + 30-day cloud retention	Real-time	Priority 3
Network Configuration	Daily automated config backup	24 hours	Priority 2
Security Logs / SIEM	Immutable log archive, 12 months minimum	Real-time	Priority 3 (compliance)

DEEP DIVE ASSESSMENT

11

RMM platform audit, alert noise reduction, maintenance optimisation

Before full managed services engagement, CDMA conducts a structured Deep Dive Assessment of the existing IT environment. This surfaces configuration debt, security gaps, and optimisation opportunities — providing a clear baseline for service delivery.

Assessment Scope

- RMM platform configuration review and alert threshold optimisation
- Network topology mapping and security posture review
- Firewall rule audit and redundancy identification
- Backup configuration validation and test recovery
- Endpoint inventory and patch status baseline
- Vulnerability scan across managed infrastructure
- Hospitality-specific maintenance window recommendations
- Current monitoring coverage gap identification
- PMS/POS integration health and dependency mapping
- Wi-Fi infrastructure survey and coverage gap assessment

Deliverables

Deliverable	Audience	Contents
Executive Summary Report	Senior Management	Business-language overview of findings, risks, and recommended priorities
Technical Detail Report	IT Team	Configuration-level findings, remediation steps, and implementation priorities

Deliverable	Audience	Contents
Remediation Roadmap	IT + Management	Prioritised action plan with timelines, resource requirements, and risk ratings
Baseline Documentation	IT Team + NOC	Network diagrams, asset inventory, and configuration snapshots for ongoing reference
Alert Tuning Report	NOC / MSP	Recommended alert thresholds, suppression rules, and escalation paths

Assessment Timeline

- 01 Kick-off**
Introductory call to align on scope, access requirements, and timeline. Credential and access collection initiated.
- 02 Remote Discovery**
Automated tooling gathers asset inventory, patch status, alert history, and network configuration data.
- 03 On-Site Visit**
Physical inspection of server rooms, network closets, Wi-Fi coverage, and critical infrastructure.
- 04 Analysis**
CDMA engineers analyse all collected data against hospitality best-practice benchmarks.
- 05 Reporting**
Full report suite delivered. Findings presented in debrief meeting with stakeholders.

Project Services for Hospitality

12

New openings, migrations, network redesigns, seasonal rollouts

Beyond ongoing managed services, CDMA delivers complex technology projects for hospitality properties — from new hotel openings to full network redesigns and system migrations.

Project Capabilities

- New Hotel Openings**

End-to-end technology deployment for new properties — network infrastructure, Wi-Fi, PMS integration, VoIP, and cabling. On-site presence through opening and staff training included.
- Network Redesigns**

Legacy infrastructure replacement with modern SD-WAN, Wi-Fi 6/6E, and micro-segmented architecture. Zero-downtime migration planning.
- SD-WAN Deployment**

ISP procurement support, hardware installation, configuration, and handover. Dual-ISP failover tested before go-live.
- Wi-Fi 6/6E Upgrades**

Site survey, access point placement design, installation, and tuning. Coverage validation with client sign-off.
- Seasonal Rollouts**

Pre-season infrastructure checks, capacity additions, and system updates. Pre-peak readiness assessments for resorts with significant occupancy variation.
- PMS/POS Migrations**

Coordination with PMS and POS vendors for platform migrations. Network preparation, testing, and cutover support with rollback procedures.

Project Delivery Standards

Phase	Activities	Output
-------	------------	--------

Phase	Activities	Output
Discovery	Requirements gathering, site survey, vendor liaison, existing infrastructure review	Scope document, project plan, risk register
Design	Network design, equipment specification, vendor selection, budget finalisation	Design document, bill of materials, configuration templates
Build	Equipment procurement, staging and configuration, pre-deployment testing	Configured and tested equipment, cutover plan
Deploy	On-site installation, system integration, staff training, go-live support	Live system, handover documentation, as-built diagrams
Handover	Documentation package, NOC integration, post-project review	Full documentation, monitoring configured, lessons learned

Onboarding Process

13

Nine-step structured onboarding for single sites and multi-property groups

CDMA's structured onboarding process ensures smooth transitions from existing providers or from unmanaged environments. Every engagement follows a documented nine-step process adapted for single properties and multi-site groups.

- 01 Discovery & Scoping**
Initial discovery call to understand the property, existing infrastructure, current pain points, and service requirements. Contract and commercial terms agreed.
- 02 Technical Discovery**
Remote and on-site technical assessment of existing infrastructure. Network diagrams, asset inventories, and credential collection.
- 03 Platform Integration**
Integration of property systems into CDMA NOC and Service Desk platforms. RMM agent deployment, monitoring configuration.
- 04 Baseline & Tuning**
Alert threshold establishment, maintenance window configuration, escalation path definition. First week of monitoring with active tuning.
- 05 Security Hardening**
Firewall rule review, network segmentation validation, endpoint protection deployment, backup configuration verification.
- 06 Service Desk Activation**
Staff communication about new service desk contact details, ticketing procedures, and escalation paths. White-label configuration complete.
- 07 Knowledge Transfer**
Documentation of property-specific procedures, vendor contacts, and escalation preferences for NOC and Service Desk teams.
- 08 Go-Live**
Full service commencement. Dedicated contact point for first 30 days to address any service delivery adjustments.
- 09 30-Day Review**
Service delivery review meeting. Alert volume analysis, ticket trends, and service optimisation recommendations.

Onboarding Timeline by Property Type

Property Type	Typical Onboarding Duration	Key Complexity Factors
Single boutique hotel (< 50 rooms)	2–3 weeks	Limited existing documentation; often unmanaged infrastructure
Mid-scale hotel (50–200 rooms)	3–4 weeks	Multiple vendor systems; PMS integration complexity
Large resort (200+ rooms)	4–6 weeks	High device count; multi-building network; complex VLAN design
Multi-property group (2–5 sites)	6–10 weeks	Standardisation across sites; phased rollout; group-level reporting
Multi-property group (5+ sites)	10–16 weeks	Full standardisation programme; dedicated project management required

SERVICE LEVEL AGREEMENT (SLA)

14

Essential / Standard / Premium tiers with defined response times

CDMA's tiered SLA structure provides flexibility for properties with different requirements and budgets while maintaining clear, contractual performance commitments.

SLA Metric	Essential	Standard	Premium
Monitoring Hours	24/7	24/7	24/7
P1 Response Time	30 minutes	15 minutes	5 minutes
P2 Response Time	2 hours	1 hour	30 minutes
P3 Response Time	Next business day	4 hours	2 hours
Service Desk Coverage	Business hours	24/7	24/7 dedicated queue
Monthly Reporting	Standard summary	Detailed report	Executive summary + KPI dashboard
Quarterly Business Review	Not included	Included	Included + dedicated engineer
Pre-Peak Readiness Check	Not included	Not included	Included annually
Dedicated Account Manager	Not included	Shared	Dedicated
Proactive Maintenance	Reactive only	Scheduled maintenance	Proactive + predictive

Priority Definitions

Priority	Definition	Examples
----------	------------	----------

Priority	Definition	Examples
P1 — Critical	Complete service outage affecting guest-facing systems or active security incident	PMS down, guest Wi-Fi offline property-wide, POS failure, ransomware detected
P2 — High	Significant degradation of key systems or partial connectivity loss	Slow PMS, intermittent Wi-Fi, VoIP quality issues, single-building connectivity loss
P3 — Medium	Single-user or non-critical system issues or service requests	Individual device problem, new user setup, software update request
P4 — Low	Enhancement requests, scheduled maintenance, or documentation updates	Report customisation, policy review, documentation updates

Escalation Process

15

NOC and Service Desk escalation paths, timeframes, and contacts

Clear escalation paths ensure that every issue reaches the right person at the right time — whether at CDMA or within your organisation.

NOC Escalation Path

Level	Role	Trigger	Actions
L1	NOC Analyst	Alert received	Triage, initial remediation attempt, documentation, client notification for P1
L2	Senior NOC Engineer	Unresolved after 15–30 min	Advanced troubleshooting, vendor engagement, parallel remediation tracks
L3	NOC Team Lead	P1 incidents or > 1 hour	Management escalation, stakeholder updates every 30 min, resource allocation
L4	CDMA Management	> 2 hours or significant business impact	Executive communication, emergency resources, executive-level client contact

Service Desk Escalation Path

Level	Role	Trigger	Actions
L1	Service Desk Agent	Ticket created	Issue logging, initial troubleshooting, basic resolution attempt
L2	Service Desk Senior	Complex issue or SLA risk	Advanced troubleshooting, vendor coordination, on-site assessment
L3	Technical Specialist	Engineering-level investigation required	Deep technical investigation, vendor escalation, on-site dispatch coordination

Level	Role	Trigger	Actions
L4	Service Delivery Manager	Recurring issues or client dissatisfaction	Root cause review, service improvement plan, client relationship management

All P1 incidents trigger automatic notification to your designated contacts via SMS and email within 5 minutes of detection — regardless of time of day.

Client Escalation Contacts

Each client has a named Service Delivery Manager (SDM) as their primary escalation contact within CDMA. The SDM is responsible for service quality, monthly reporting, quarterly reviews, and acting as an advocate within CDMA for the client's needs.

Security and Compliance

16

ISO 27001:2022, NIS2, DORA, GDPR, PCI DSS, SOC 2 Type II

CDMA operates under a rigorous security and compliance framework, ensuring that our services meet international standards and regulatory requirements applicable to our hospitality clients.

Certifications & Frameworks

Framework	CDMA Status	Relevance to Hospitality
ISO 27001:2022	CDMA certified	Information security management — baseline for all service delivery and data handling
PCI DSS	Advisory and support services	Guest payment card data protection, network segmentation, quarterly scanning
GDPR	Compliant + client support services	Guest personal data handling, breach notification, DPA templates for processors
SOC 2 Type II	In progress	Security, availability, and confidentiality assurance for MSP and enterprise clients
NIS2 Directive	Advisory services	Network and information security obligations for relevant hospitality operators
DORA	Advisory services	Digital operational resilience for hospitality groups with financial services linkage
Cyber Essentials Plus	CDMA certified	UK-aligned baseline security controls demonstrating fundamental cyber hygiene

Data Handling Principles

- All client data is processed under a formal Data Processing Agreement (DPA)
- Data is stored in EU-based infrastructure with encrypted transmission and storage
- Access to client environments is strictly role-based with full audit logging

- Encryption at rest (AES-256) and in transit (TLS 1.2+) for all managed data
- Annual penetration testing of CDMA internal systems by independent assessors
- Security awareness training for all CDMA staff, mandatory annually
- Supplier and subcontractor security assessments conducted before engagement

ABOUT CDMA

17
