

CDMA HOSPITALITY PLAYBOOK

A Comprehensive Guide to CDMA's Managed IT & Cybersecurity Services
for Hospitality Organisations and MSP Partners

May 2025 Edition

Introduction

Hospitality never sleeps. Your guests expect seamless connectivity, instant service, and zero downtime — 24 hours a day, 365 days a year. Behind every smooth check-in, reliable guest Wi-Fi connection, and flawless point-of-sale transaction sits a complex IT infrastructure that demands constant attention.

This playbook has been created specifically for hospitality organisations and the Managed Service Providers (MSPs) who support them. It explores CDMA's full suite of services in the context of hotel groups, resorts, boutique properties, and hospitality venues — explaining how our NOC, Service Desk, cybersecurity, network architecture, and project capabilities address the unique demands of this fast-moving industry.

Whether you manage a single property or a portfolio spanning multiple countries, CDMA provides the always-on IT backbone that hospitality demands — from guest Wi-Fi and captive portal design to Mobile DAS, backup and disaster recovery, and 24/7 managed detection and response.

All CDMA services are delivered on a white-label basis. From your guests' and staff's perspective, we operate as a seamless extension of your own IT team.

Contents

01	Why Hospitality Needs 24/7 IT Support	Always-on operations, peak season pressure, guest-facing systems
02	CDMA Services Overview	Three pillars: Resilient Infrastructure, Secure Operations, Hotel-Grade Productivity
03	Hospitality Network Architecture	SD-WAN, VLAN segmentation, access control, SIEM monitoring layers
04	NOC for Hospitality	Proactive monitoring, incident response, coverage tiers, certifications
05	Service Desk for Hospitality Teams	End-user support, user account management, vendor coordination
06	Guest Wi-Fi & Captive Portal	Wi-Fi 6/6E design, branded portal, network analytics, conference revenue
07	Property Systems Continuity	PMS/POS monitoring, IPTV, digital signage, Teams Phone & VoIP
08	Cybersecurity for Hotels	Prevent, Detect & Respond, MDR/SOC, PCI DSS, GDPR alignment
09	Mobile DAS Solutions	Nextivity-powered 4G/5G coverage, eliminating dead zones throughout property
10	Backup & Disaster Recovery	15-min RPO, immutable backups, documented DR runbooks, tested recovery
11	Deep Dive Assessment	RMM platform audit, alert noise reduction, maintenance optimisation
12	Project Services for Hospitality	New openings, migrations, network redesigns, seasonal rollouts
13	On-boarding Process	Nine-step structured on-boarding for single sites and multi-property groups
14	Service Level Agreement (SLA)	Essential / Standard / Premium tiers with defined response times

15	Escalation Process	NOC and Service Desk escalation paths, timeframes, and contacts
16	Security and Compliance	ISO 27001:2022, NIS2, DORA, GDPR, PCI DSS, SOC 2 Type II
17	About CDMA	Established 2011, 56 countries, 6 continents, offices in Nicosia, Dubai & Athens

01

Why Hospitality Needs 24/7 IT Support

Hospitality operates around the clock. A server crash at 2 AM during peak season does not wait for business hours. A Wi-Fi outage in a 300-room resort triggers hundreds of guest complaints within minutes. In hospitality, IT is not back-office — it is the guest experience.

The Hospitality IT Challenge

Always-On Operations	Hotels, resorts, and venues operate 24/7/365. Front desk check-ins happen at midnight. Room service flows through POS systems at 3 AM. Housekeeping relies on mobile devices. Any downtime directly impacts the guest experience and revenue.
Peak Season Pressure	Occupancy surges place enormous strain on networks, PMS systems, and payment processing. Seasonal peaks bring 2–4 devices per guest requiring high-density Wi-Fi. The worst time for an IT failure is precisely when it is most likely to occur.
Complex Vendor Ecosystem	Hospitality IT involves PMS providers (Opera, Mews, Protel), POS systems (Micros, Lightspeed), IPTV, door lock systems, CCTV, and VoIP. Coordinating between them requires deep domain knowledge.
Staff Turnover	Hospitality has one of the highest staff turnover rates of any industry. Seasonal hiring means constant onboarding and offboarding of accounts, devices, and credentials — creating operational overhead and security risk.
Payment & Privacy Compliance	PCI DSS and GDPR are non-negotiable. Guest databases contain PII, payment systems process card transactions continuously, and strict network segmentation must be maintained at all times.
Mobile Coverage Gaps	Thick walls, basements, and large conference areas create signal dead zones that frustrate guests and hinder staff. Comprehensive 4G/5G coverage (DAS) is an increasingly expected amenity.

The bottom line: Hospitality IT demands proactive 24/7 monitoring and rapid incident response. Reactive support is not an option when guest satisfaction and revenue are on the line.

Hospitality Systems We Help Protect

System	Key Platforms	Why It Matters
Property Management System (PMS)	Opera, Mews, Protel, Hotelogix	Reservations, check-in/out, billing, housekeeping — the heart of operations
Point of Sale (POS)	Micros, Lightspeed, Toast	Restaurant, bar, and room-service transactions. Must be available 24/7
Guest Wi-Fi	Aruba, Cisco Meraki, Ubiquiti	The single most common guest complaint when it fails. Non-negotiable.
VoIP & Telephony	Teams Phone, Cisco, Avaya	Guest-room phones and reception lines. Downtime means missed bookings
Digital Key & Smart Locks	Assa Abloy, Dormakaba	Keyless entry requires constant connectivity between locks and PMS
CCTV & Access Control	Hikvision, Axis, Genetec	Critical for guest safety and regulatory compliance
Booking Engines & OTAs	Booking.com, Expedia, SiteMinder	Real-time inventory sync. A failure can cause overbookings or lost revenue
IPTV & Digital Signage	Samsung LYNK, LG Pro:Centric	In-room entertainment and lobby displays require constant monitoring

02

CDMA Services Overview

CDMA provides a comprehensive suite of managed IT and cybersecurity services structured around three integrated pillars designed specifically for hospitality. All services are delivered white-label — your clients never know we exist.

Three Integrated Pillars

Resilient Infrastructure

SD-WAN with automatic failover, Wi-Fi 6/6E high-density networks, enterprise LAN switching with secure VLAN segmentation, and full isolation of guest, PMS, IoT, and admin networks. Your critical systems are always available and performing optimally.

Secure Operations

24/7 network monitoring and MDR/SOC services, advanced endpoint protection and threat detection, continuous vulnerability management, and automated backup and disaster recovery. Your data, guests, and property are protected around the clock.

Hotel-Grade Productivity

PMS/POS system continuity and monitoring, Teams Phone and VoIP support, IPTV and digital signage management, conference AV, and guest application support. Staff are empowered; guests enjoy superior connectivity.

Key Services at a Glance

Service	What It Does	Primary Hospitality Benefit
NOC (24/7)	Proactive monitoring, maintenance, and remediation of servers, network devices, and endpoints	Guest Wi-Fi uptime, PMS/POS reliability, peak-season readiness
Service Desk (24/7)	First-contact technical support for hotel staff via phone and email (white-label)	Fast resolution, seasonal staff onboarding, minimal guest disruption
Guest Wi-Fi & Captive Portal	Wi-Fi 6/6E high-density wireless, branded portal, PMS integration, analytics	Superior connectivity, conference revenue, marketing data capture
Cybersecurity / MDR	24/7 SOC, EDR, SIEM, next-gen firewall, threat isolation in 15 minutes	Ransomware protection, PCI DSS and GDPR compliance support
Mobile DAS	Nextivity-powered 4G/5G distributed antenna systems	Ubiquitous cellular coverage for guests and staff throughout property
Backup & DR	Immutable backups with 15-min RPO, offsite replication, tested DR runbooks	Rapid recovery from ransomware, hardware failure, or natural disaster
Deep Dive Assessment	RMM platform audit and optimisation, alert tuning for hospitality	Reduced noise, better visibility, hospitality-aligned maintenance windows
Project Services	New openings, SD-WAN, Wi-Fi 6/6E, migrations, network redesigns	On-time delivery, zero guest disruption, documented procedures

03

Hospitality Network Architecture

A properly segmented network protects guest data, ensures PCI compliance, and maintains performance across all property systems simultaneously. CDMA designs, deploys, and manages enterprise-grade network architectures tailored to the specific demands of hospitality operations.

Micro-segmentation principle: A compromised guest device must never be able to reach payment systems or property management infrastructure. This is enforced at the VLAN level — not just firewall rules — for true defence in depth.

Five-Layer Architecture

01 Internet & SD-WAN Layer	Dual-ISP failover with intelligent traffic routing ensures continuous connectivity even during provider outages. LTE/5G backup ensures VoIP reception can always take reservations even during primary internet failures. No single point of failure for connectivity.
02 Core Security & Switching	Next-generation firewall with application awareness and intrusion prevention creates secure network boundaries with deep packet inspection. Managed core switches provide the backbone for all VLAN segregation with centralised management and 24/7 monitoring.
03 VLAN Segmentation	Minimum six isolated VLANs: Guest Wi-Fi, Staff/Administration, PMS/POS (PCI-scoped), CCTV, IPTV, IoT devices, and Management. Payment systems sit in their own PCI-scoped segment with no lateral access from other segments.
04 Access Control & Captive Portal	Branded captive portal with RADIUS authentication. Guests are automatically provisioned access at check-in and removed at check-out via PMS integration. Voucher codes and time-limited access support conference and event guests.

05 Monitoring & Logging (SIEM)

A SIEM platform collects security events, traffic patterns, and system health metrics for 24/7 threat detection. Anomaly detection identifies suspicious behaviour — such as a guest device attempting to reach POS infrastructure — in real time.

What CDMA Deploys in Hospitality Networks

Technology	Details
SD-WAN	Intelligent dual-ISP failover with automatic traffic rerouting and LTE/5G backup
Wi-Fi 6/6E	High-density APs with seamless roaming, per-room bandwidth management, channel optimisation
Enterprise LAN	Managed switching with VLAN tagging, QoS prioritisation for PMS/POS, redundant uplinks
VLAN Segmentation	Six+ isolated segments: Guest, Staff, PMS/POS (PCI), CCTV, IPTV, IoT, Management
Next-Gen Firewall	Deep packet inspection, application awareness, intrusion prevention, web filtering
RADIUS & Captive Portal	Centralised authentication with PMS integration, marketing analytics, voucher codes

04

NOC for Hospitality

Our Network Operations Centre provides 24/7 proactive monitoring, management, and remediation of your hospitality IT infrastructure — keeping guest-facing and back-office systems running without interruption.

How Does It Work?	Why It Matters in Hospitality
We monitor your infrastructure using your existing RMM platform or our own SaaS-based monitoring agents. Our NOC team analyses alerts, takes corrective action, and escalates to you only when necessary. We work within your own RMM instance if you use a supported platform.	A failed firewall at a resort can take down guest Wi-Fi, POS terminals, and door lock controllers simultaneously. Proactive monitoring catches degradation before it becomes a guest-impacting outage. We review your configuration before peak periods so you never have to worry.

What We Monitor in Hospitality

- Guest Wi-Fi access points, controllers, and uptime
 - Firewalls, switches, and core network infrastructure
 - PMS and POS server health and application availability
 - Backup job success, failure, and data integrity
 - Anti-virus and endpoint security status
- VoIP system connectivity and call routing integrity
 - CCTV and access control server health
 - IPTV and digital signage content delivery
 - SD-WAN tunnel status and failover events
 - SIEM alert feeds and security event correlation

Hospitality Incident Examples

Scenario	What CDMA Does	Impact Avoided
Guest Wi-Fi AP fails at 11 PM	Alert received, AP identified, remote restart attempted. Hardware failure confirmed → escalated to vendor with diagnostics.	Guests in affected area restored within minutes, not hours.
PMS server disk at 85% critical	Automated disk cleanup triggered. Root cause analysis performed and capacity plan recommended if persists.	PMS stays online. No check-in/out disruption.
Windows patch pending on POS server	Patch scheduled for agreed 3 AM maintenance window. POS services verified healthy post-reboot.	Patching done outside peak hours. No service interruption.
Firewall CPU at 95% during high season	Traffic analysis performed. Configuration optimisation applied or escalated to vendor.	Network performance maintained during peak occupancy.
Backup job failure on file server	Backup reattempted. If media/hardware issue → escalated with full diagnostic report.	Data protection maintained. Compliance preserved.
SD-WAN failover event detected	Secondary ISP path confirmed active. Primary path diagnostics run. ISP notified if carrier issue.	Continuous internet connectivity. No guest-facing impact.

High-season readiness: Before peak periods, our NOC team reviews your monitoring configuration, confirms maintenance schedules, and ensures alert thresholds are tuned for increased load. We prepare so you do not have to worry.

Coverage Options & Service Tiers

- 24/7/365 — Full around-the-clock monitoring (recommended for hotels and resorts)
- In-hours — Your normal business hours, Monday to Friday
- Out-of-hours — Evenings, weekends, and public holidays
- Hybrid — Mix of coverage types per property within the same group

Workstation Packages

Server Packages

Feature	Feature
Monitoring & notification	Monitoring & notification
Windows & Mac patch management	24/7 or In-hours/OOH coverage
Antivirus management	Automation
24/7 coverage	Remediation & root cause analysis
Remote remediation	Patch management
Third-party application patching	Vendor management
Disk cleanup & health checks	Service requests

NOC Engineer Certifications

Standard Tier	Premium & Consultant Tier
• Microsoft Certified: Azure Fundamentals (AZ-900) • Microsoft 365 Fundamentals (MS-900) • Security, Compliance & Identity (SC-900) • Windows Client (MD-102)	• Azure Administrator (AZ-104) • Azure Security Engineer (AZ-500) • CCNA & CCNP Enterprise (Cisco) • Sophos, Fortinet, VMware, Hyper-V product certs

05

Service Desk for Hospitality Teams

Our Service Desk delivers end-user technical support directly to your hospitality staff — from front desk agents and restaurant managers to housekeeping supervisors. We focus on First Contact Resolution (FCR) to get your people back to serving guests as quickly as possible.

How Does It Work?	Why It Matters in Hospitality
Your authorised staff contact us by phone or email. From their perspective, we are members of your own IT team. We troubleshoot and resolve at first contact where possible, or escalate to our NOC team or your internal resources as needed.	When a front desk agent cannot log in during a rush of check-ins, every minute counts. Hospitality staff are not IT specialists — they need fast, patient support that respects the urgency of guest-facing operations.

What We Support

Category	Examples
Account Management	Password resets (PMS, POS, email), new account setup, access group assignment, offboarding
Onboarding & Offboarding	Active Directory accounts, email provisioning, Wi-Fi credentials, device setup
Hardware & Peripherals	Printer issues at front desk, back office, and kitchen; workstation troubleshooting
Mobile & Email	Email on mobile devices, M365 support, SPAM filter configuration
VoIP & Telephony	Teams Phone, Cisco, Avaya — configuration, troubleshooting, and extension management
Application Support	Pre-approved software installation, PMS/POS first-line support, IPTV queries

Category	Examples
Wi-Fi	Staff device connectivity troubleshooting, dead zone reporting, access credential issues

Typical Hospitality Scenarios

• Front desk agent locked out of PMS during peak check-in • Restaurant manager needs POS receipt printer reconnected • New seasonal hire needs full system access set up same day	• Night auditor unable to generate end-of-day reports • General manager needs email configured on new phone • Housekeeping supervisor reports Wi-Fi dead zone on 3rd floor
---	--

Seasonal staffing support: Before high season, we can pre-provision accounts for incoming staff so new hires have system access from day one. We work with your HR and IT teams to ensure a smooth seasonal ramp-up.

06

Guest Wi-Fi & Captive Portal

Guest Wi-Fi quality directly impacts online reviews and repeat bookings. Our high-density wireless design handles hundreds of concurrent devices whilst maintaining performance in every room and public space. The single most common guest complaint when it fails — reliable, segmented, high-capacity Wi-Fi is non-negotiable.

Enterprise-Grade Wireless Design	Wi-Fi 6/6E access points provide higher throughput and lower latency in high-density environments. Seamless roaming ensures guests move through the property without drops. Bandwidth management per room prevents a single heavy user from degrading service for others.
Branded Guest Portal	A customised captive portal delivers a professional, on-brand experience. Features include voucher codes, room-based authentication, and PMS integration for automatic access provisioning at check-in and removal at check-out. No manual account management required.
Network Analytics	Track dwell time, device types, peak usage patterns, and coverage gaps. This data enables network performance optimisation and marketing opportunities, including opt-in marketing consent capture through the portal.
Network Segmentation	Guest Wi-Fi is always isolated from staff, PMS/POS, CCTV, and IoT networks at the VLAN level. A guest device cannot reach payment infrastructure under any circumstances — enforced in hardware, not just firewall rules.

Conference Revenue Impact: Reliable, high-capacity Wi-Fi in meeting spaces directly drives conference bookings and event revenue. Poor connectivity leads to contract penalties and lost repeat business. Our enterprise wireless design ensures conference spaces can support the most demanding events.

Guest Wi-Fi Deliverables

Deliverable	Details
Wireless survey & design	Predictive RF planning and post-installation validation for complete coverage
Wi-Fi 6/6E deployment	High-density APs with seamless roaming, band steering, and load balancing
Captive portal	Branded portal with PMS integration, voucher codes, and social/email login
RADIUS authentication	Secure, centralised auth with per-user and per-room policy enforcement
Bandwidth management	Per-SSID and per-device rate limiting for fair access across all guests
Analytics dashboard	Real-time and historical reporting on usage, coverage, and device counts
24/7 monitoring	AP uptime monitoring with automatic alerting and remote remediation

07

Property Systems Continuity

Your property management and point-of-sale systems are the operational heartbeat of your hotel. Our proactive monitoring ensures they are always available when your staff and guests need them. Continuous health checks, scheduled backups with automated verification, and maintenance windows coordinated with low-occupancy periods minimise guest impact whilst maximising system reliability.

System	What We Monitor & Manage
PMS/POS Monitoring	Health checks on services, databases, and application response for Opera, Mews, Protel, Micros, and Lightspeed. Backup verification and maintenance windows during low-occupancy periods.
IPTV & Digital Signage	Content distribution monitoring, channel availability checks, and rapid response to guest complaints. Health checks for Samsung LYNK, LG Pro:Centric, and lobby display systems.
Teams Phone & VoIP	Call routing integrity for front desk and internal comms. LTE/5G failover ensures reception can always take reservations even during primary internet outages.
Booking Engines & Channel Managers	Connectivity monitoring between PMS and OTAs (Booking.com, Expedia, SiteMinder). Alerts when real-time inventory synchronisation fails, preventing overbookings.
Digital Key & Smart Locks	Connectivity monitoring between lock controllers, gateways, and PMS. Alert escalation for lock communication failures that could prevent guest room access.
Back-Office Systems	Finance, payroll, HR, and procurement system availability. Integration health checks between back-office platforms and PMS. Backup verification for critical business data.

Front Desk Never Down: Our architecture includes LTE/5G failover for VoIP systems, ensuring reception can always take reservations and assist guests even during primary internet outages.

08

Cybersecurity for Hotels

Hotels are prime targets for cyberattacks. Guest databases contain PII, payment systems process card transactions continuously, and high staff turnover creates access control challenges. GDPR, PCI DSS, and data protection are fundamental to maintaining guest trust and regulatory compliance.

Prevent	Detect & Respond
• Next-generation firewall with application awareness and intrusion prevention • Endpoint detection & response (EDR) on all workstations and servers • Advanced email security — phishing, malware, and BEC filtering • Web content filtering and DNS security • Privileged access management (PAM) for admin accounts • MFA enforced on all remote access and admin tools • AES-256 encrypted remote sessions for all CDMA engineers • Regular security patching within hospitality-safe windows	• 24/7 managed detection & response (MDR) with dedicated SOC • SIEM collecting events from all devices, endpoints, and servers • Specific playbooks for ransomware, POS skimmers & phishing • Threat isolation within 15 minutes for Priority 1 incidents • Forensic investigation and root cause analysis • GDPR breach notification procedure support (72-hour reporting) • External SOC monitoring with continuous threat intelligence feeds

PCI DSS & GDPR Alignment

Framework	Status	Key Controls Implemented
PCI DSS	Awareness & implementation support	POS/payment VLAN isolated, TLS 1.2+ encryption, access controls, quarterly vulnerability scans
GDPR	Compliant	EU-server storage, SOC 2 Type II certified ticketing, 72-hour breach notification, data minimisation
ISO 27001:2022	Certified	Full ISMS covering all CDMA operational processes and systems

Framework	Status	Key Controls Implemented
NIS2	Compliant	Network and Information Systems directive — operational security controls
DORA	Compliant	Digital Operational Resilience Act — DR testing, incident reporting
SOC 2 Type II	Certified (CRM/ticketing)	Trust Service Criteria for security and availability

Hospitality security best practice: We recommend separate VLANs for guest Wi-Fi, staff, POS, CCTV, and IoT; MFA on all administrative access; and regular credential rotation — especially at seasonal changeover when departing staff accounts must be immediately disabled.

09

Mobile DAS Solutions

Ensuring ubiquitous 4G/5G coverage throughout your property — from basement car parks to top-floor suites. Our Nextivity-powered Distributed Antenna Systems (DAS) eliminate dead zones, enhancing both guest satisfaction and operational efficiency.

Benefit	Details
Guaranteed Coverage	Blanket 4G/5G signal in every corner — basements, thick-walled rooms, expansive conference centres, and outdoor terraces. Guests experience uninterrupted personal mobile connectivity throughout their stay.
Superior Guest Experience	Guests enjoy reliable calls, streaming, and apps over cellular, reducing reliance on Wi-Fi and improving satisfaction scores. Mobile coverage quality is increasingly mentioned in online reviews.
Enhanced Operations	Seamless mobile communication for housekeeping, maintenance, security, and front of house — enabling faster response times for maintenance requests and emergency coordination.
Conference & Events Revenue	Conference organisers require guaranteed cellular connectivity for presenters, exhibitors, and delegates. Reliable DAS is a competitive differentiator when selling conference and event space.
Reduced Wi-Fi Load	Strong cellular signal means guests make calls and use mobile data over cellular rather than Wi-Fi — reducing wireless network load and improving Wi-Fi performance for data-intensive applications.
Future-Proof Technology	Nextivity solutions support current and emerging 4G/5G bands (Band 3, 7, 20, and 5G n78), covering all major EU carriers. Your investment remains relevant as mobile technology evolves.

Deployment Process

Step	Activity	Description
1	RF Site Survey	Walk-test to identify signal dead zones and measure current signal strength from all relevant carriers
2	Coverage Design	System design specifying antenna locations, cable routes, and head-end equipment for target coverage
3	Carrier Approval	Nextivity systems are carrier-approved, avoiding interference and ensuring regulatory compliance
4	Installation	Professional installation by certified engineers with minimal disruption to hotel operations
5	Validation	Post-installation walk-test to confirm all coverage targets are met throughout the property
6	Monitoring	Remote system health monitoring to detect and address faults before they impact guests or staff

10

Backup & Disaster Recovery

System failures, ransomware attacks, or natural disasters should not cripple your property. Our backup and disaster recovery strategy ensures rapid restoration of critical systems with minimal data loss.

Cost-Benefit Reality: A one-hour PMS outage during high season costs thousands in lost bookings and chargebacks. Our DR investment typically pays for itself after preventing just one significant incident.

DR Capability	Details
Comprehensive backup coverage	Server, database, and PMS backups with 15-minute RPO (configurable). Daily automated offsite replication to geographically separate storage. All PMS databases and POS transaction logs included.
Immutable backup protection	Backup copies stored in immutable format preventing ransomware encryption. Immutability enforced at the storage layer — even admin access cannot delete or encrypt these copies.
Quarterly restore tests	Formal recovery tests validate that RTOs are achievable and procedures remain current. Test results documented and shared with you as part of service reporting.
Documented DR runbook	Defines specific RTOs for PMS, POS, VoIP, and Wi-Fi controller systems. Clear escalation paths and tested procedures reduce stress during actual incidents.
Offsite replication	Critical data replicated to geographically separate storage. Cross-site replication between your properties available for multi-property groups. All replication encrypted with AES-256.

Recovery Objectives by System

System	RPO (Max Data Loss)	RTO (Recovery Time)
PMS Server	15 minutes	< 4 hours
POS Server	15 minutes	< 2 hours
File Server	1 hour	< 4 hours
Email (M365)	Platform SLA	Platform SLA
Wi-Fi Controller	24 hours (config backup)	< 1 hour
Firewall	24 hours (config backup)	< 2 hours
Domain Controller	1 hour	< 4 hours

11

Deep Dive Assessment

A unique audit and optimisation service for your RMM platform, designed to ensure your monitoring is tuned for the specific demands of hospitality environments. Fixed-cost assessment, prioritised recommendations, no surprises.

Assessment Area	What We Review	Hospitality Focus
Alert & Noise Reduction	Alert thresholds, filters, policies, and dashboard configuration	Are transient guest devices excluded from workstation-level alert policies?
Maintenance Windows	Patch schedules, backup timing, and planned task scheduling	Do windows avoid peak check-in, breakfast, and dinner hours (typically 2–5 AM)?
Visibility & Dashboards	Dashboard layout, property-level grouping, and health views	Can you see per-property health at a glance across your entire portfolio?
Deployment & Coverage	Agent deployment, network node coverage, and device class accuracy	Are PMS/POS servers prioritised correctly in alert severity?
Security Posture	Security monitoring config, backup management, and patch compliance	Are seasonal capacity changes accounted for in monitoring thresholds?

12

Project Services for Hospitality

From new hotel openings to network redesigns, our project team delivers specialist hospitality IT projects on time and on budget. Most projects are delivered out-of-hours to minimise disruption to guests and operations.

Project Type	Scope	Typical Deliverables
New Property Opening	Full IT setup for new hotels, resorts, or venue openings	Network infrastructure, server deployment, workstation rollout, PMS/POS install, systems integration
Network Redesign	Guest Wi-Fi overhaul, VLAN segmentation, firewall replacement, SD-WAN	Wi-Fi 6/6E, guest/staff/CCTV/POS/IoT VLAN isolation, DAS for dead zones
Cloud Migration	Microsoft 365, Active Directory restructuring, file server migration	Email migration, Azure AD, SharePoint/OneDrive, hybrid identity configuration
Security Hardening	Firewall replacement, VLAN segmentation, MFA rollout, EDR deployment	Zero-trust network access, EDR on all endpoints, PAM for admin accounts
Server Infrastructure	Windows Server 2022 deployment, virtualisation, backup implementation	Hyper-V/VMware deployment, DR configuration, backup validation
Seasonal Rollout	Endpoint rollout for seasonal staff, account pre-provisioning	Laptops/tablets configured, AD accounts, M365 licences, Wi-Fi credentials

Risk-Free Delivery: Our project management methodology ensures clear milestones, defined scope, and no surprises. We co-ordinate with PMS vendors, ISPs, and hardware suppliers on your behalf to keep projects on track.

13

On-boarding Process

On-boarding enables us to understand your hospitality environment in detail and gather everything needed to deliver our services successfully — from property layouts and vendor contacts to escalation procedures and maintenance preferences.

A simple property on-boarding can be achieved in days. For multi-site hotel groups, we recommend a phased approach — starting with the flagship property and rolling out to additional sites over subsequent weeks.

Nine-Step On-boarding Process

Step	Owner	Activity
1	You	Contact our sales team. Share property requirements and initial technical overview.
2	Both	Initial discovery call. Book detailed on-boarding session. Finalise commercial terms.
3	Both	Agree live service parameters, coverage levels, and SLA tier per property.
4	CDMA	Issue contract with agreed on-boarding timeframe and all service details.
5	You	Sign contract and pay on-boarding fee to commence on-boarding.
6	You	Provide access to platforms and vendors. Share environment documentation.
7	Both	On-boarding call: knowledge transfer, property walkthrough, vendor contact collection.
8	CDMA	System setup: monitoring config, agent deployment, dashboard build, runbook creation.

Step	Owner	Activity
9	Both	System test, go live, ongoing reporting and regular review meetings commence.

What We Discuss During On-boarding

Topic Area	Information Gathered
Property Details	Organisation structure, property locations, types (hotel/resort/apartments), occupancy patterns
Technical Environment	RMM platform, PSA software, network diagrams, asset inventories, vendor support contracts
Key Systems	PMS, POS, Wi-Fi architecture, VoIP setup, door locks, CCTV, IPTV, booking engine
Vendor Contacts	PMS vendor, ISP, hardware suppliers, specialist contractors — all captured for escalation
Service Configuration	Coverage hours per property, escalation contacts, maintenance window preferences
Operational Rhythms	Check-in/out peak times, high-season dates, blackout periods for changes
Known Issues	Recurring problems, historical incidents, areas of concern to address in monitoring setup

14

Service Level Agreement (SLA)

We offer a comprehensive SLA with three tiers designed to match the operational requirements and budget of different property types. All tiers include proactive monitoring, security management, and expert hospitality IT support.

Service Tier Comparison

Service Element	Essential	Standard	Premium
Coverage Hours	8×5 (Business Hours)	12×5 (Extended Days)	24×7×365 (Always On)
P1 Remote Response	15 minutes	15 minutes	15 minutes
P2 Remote Response	1 hour	1 hour	30 minutes
P3 Remote Response	4 hours	4 hours	2 hours
Onsite (Metro Areas)	By agreement	P1: 4 hours	P1: 2 hours
Service Desk Languages	English & Greek	English & Greek	English & Greek
Account Reviews	Annually	Quarterly	Monthly
DR Testing	Annual	Annual	Semi-annual
MDR/SOC Included	Add-on	Add-on	Included

Priority Definitions for Hospitality

Priority	Definition	Hospitality Example
High (P1)	Multiple systems or users affected; guest-facing services impacted	PMS server down, guest Wi-Fi outage across property, firewall offline
Medium (P2)	Single system or user moderately affected; some operational impact	Single POS terminal offline, email access issue for manager
Low (P3)	Minor issue; no guest impact	Non-urgent software update, printer configuration change
Service Request	Planned change or information request	New user account creation, device procurement advice

15

Escalation Process

Our goal is to resolve issues within the stated SLA, or escalate back to you with full context so your team can take immediate action. Ticket ownership always remains with the originating engineer for full accountability.

When We Escalate (NOC)

- The issue involves a system, network, or service we cannot access
- The issue involves a system we do not support (e.g. PMS application-level bugs)
- The issue involves a non-supported third-party vendor
- The issue cannot be resolved within the escalation timeframe

NOC Escalation Timeframes

Priority	Escalation Timeframe	Escalation Point	Notification Method
High (P1)	Within 2 hours	Your technical contact	Phone call + ticket update
Medium (P2)	Within 4 hours	Your technical contact	Ticket notification
Low (P3)	Within 16 hours	Your technical contact	Ticket notification

Service Desk Escalation

Priority	Escalation Point	Notification Method
High (P1)	Your technical contact	Phone call + ticket update
Medium (P2)	Your technical contact	Ticket notification
Low (P3)	Your technical contact	Ticket notification

Internal escalation: We escalate tickets internally to specialist teams (network, Windows, Mac, security) as required. The originating engineer retains ticket ownership throughout for full accountability and continuity.

16

Security and Compliance

Hospitality organisations handle sensitive guest data every day — passport details, payment card information, personal preferences, and travel patterns. We are committed to ensuring security is maintained across all aspects of our operation.

Security Area	Controls & Measures
Human Resources	Employment history verification, ID checks, professional qualifications verification, minimum 2 verified references, clean criminal record checks, NDAs for every employee
Physical Security	Access control at all facilities, CCTV with night vision, 24/7 UPS and backup generator, redundant internet connectivity at all office locations
Infrastructure Security	Principle of least-access for all systems, MFA on all tools and remote access, AES-256 encrypted remote sessions, external SOC monitoring, ITIL best-practice operations
Redundancy & Availability	24/7 backup generator and UPS, redundant internet connectivity, cloud-based SaaS/IaaS for critical systems, documented business continuity and disaster recovery plan
Guest & Customer Data	SOC 2 Type II certified CRM and ticketing, secure credential storage, all data on EU servers (GDPR), strict PII handling procedures aligned to GDPR requirements
Certifications	ISO 27001:2022 certified, NIS2 compliant, DORA compliant, GDPR compliant, PCI DSS awareness and implementation support

17

About CDMA

Providing exceptional service to our partners' clients is our number one priority. CDMA has been providing specialist IT support since 2011, first as an MSP and now as a trusted partner to MSPs on an international basis. We operate from Nicosia, Cyprus with offices in Dubai and Athens.

Since 2011 In operation	56 Countries End-customers served	6 Continents Global coverage	24/7/365 Support availability
-----------------------------------	---	--	---

Why CDMA for Hospitality?

Differentiator	Details
Established Since 2011	Over a decade of experience delivering NOC, Service Desk, cybersecurity, and project services for MSPs worldwide. We understand the demands of always-on service delivery.
International Coverage	56 countries and 6 continents served — including hotels, resorts, and hospitality venues. Experienced with the regulatory and operational requirements of international hotel groups.
24/7 Support	NOC, Service Desk, and MDR/SOC operate around the clock, 365 days a year — matching the operational rhythm of hospitality. No shift gaps; no out-of-hours surcharges for Premium tier.
White-Label Delivery	We operate as a seamless extension of your team. Your guests and staff never know we exist. Your brand, your relationships, our expertise.

Differentiator	Details
ISO 27001:2022 Certified	Structured service delivery with ITIL best-practice operations, clear SLAs, and defined escalation procedures. No ambiguity, no surprises.
Hospitality Expertise	Our runbooks, alert policies, maintenance windows, and escalation procedures are all tuned for hospitality. We speak PMS, POS, IPTV, and guest connectivity — not just IT.

CDMA Hospitality Service Summary

Service	What It Does	Hospitality Benefit
NOC (24/7)	Proactive monitoring, maintenance & remediation of all infrastructure	Guest Wi-Fi uptime, PMS/POS reliability, peak-season readiness
Service Desk (24/7)	White-label first-contact technical support for hotel staff	Fast resolution, seasonal onboarding, minimal guest disruption
Guest Wi-Fi & Captive Portal	Wi-Fi 6/6E design, branded portal, PMS integration, analytics	Superior connectivity, conference revenue, marketing data
Property Systems Continuity	PMS/POS, IPTV, digital signage, VoIP monitoring & management	Zero downtime for guest-facing operations, VoIP LTE/5G failover
Cybersecurity / MDR	24/7 SOC, EDR, SIEM, NGFW, threat isolation in 15 minutes	Ransomware protection, PCI DSS & GDPR compliance support
Mobile DAS	Nextivity-powered 4G/5G distributed antenna systems	Ubiquitous cellular coverage for guests and staff throughout property
Backup & DR	15-min RPO, immutable backups, offsite replication, tested DR runbooks	Rapid recovery from any incident, compliance & data protection
Deep Dive Assessment	RMM platform audit & optimisation tuned for hospitality	Reduced alert noise, better visibility, hospitality-aligned maintenance
Project Services	New openings, SD-WAN, Wi-Fi 6/6E, migrations, network redesigns	On-time delivery, zero guest disruption, documented procedures
On-boarding	Nine-step structured setup for new properties and clients	Smooth handover, property-specific knowledge transfer, rapid go-live

CDMA HOSPITALITY PLAYBOOK

A Comprehensive Guide to CDMA's Managed IT & Cybersecurity Services
for Hospitality Organisations and MSP Partners

May 2025 Edition

Introduction

Hospitality never sleeps. Your guests expect seamless connectivity, instant service, and zero downtime — 24 hours a day, 365 days a year. Behind every smooth check-in, reliable guest Wi-Fi connection, and flawless point-of-sale transaction sits a complex IT infrastructure that demands constant attention.

This playbook has been created specifically for hospitality organisations and the Managed Service Providers (MSPs) who support them. It explores CDMA's full suite of services in the context of hotel groups, resorts, boutique properties, and hospitality venues — explaining how our NOC, Service Desk, cybersecurity, network architecture, and project capabilities address the unique demands of this fast-moving industry.

Whether you manage a single property or a portfolio spanning multiple countries, CDMA provides the always-on IT backbone that hospitality demands — from guest Wi-Fi and captive portal design to Mobile DAS, backup and disaster recovery, and 24/7 managed detection and response.

All CDMA services are delivered on a white-label basis. From your guests' and staff's perspective, we operate as a seamless extension of your own IT team.

Contents

01	Why Hospitality Needs 24/7 IT Support	Always-on operations, peak season pressure, guest-facing systems
02	CDMA Services Overview	Three pillars: Resilient Infrastructure, Secure Operations, Hotel-Grade Productivity
03	Hospitality Network Architecture	SD-WAN, VLAN segmentation, access control, SIEM monitoring layers
04	NOC for Hospitality	Proactive monitoring, incident response, coverage tiers, certifications
05	Service Desk for Hospitality Teams	End-user support, user account management, vendor coordination
06	Guest Wi-Fi & Captive Portal	Wi-Fi 6/6E design, branded portal, network analytics, conference revenue
07	Property Systems Continuity	PMS/POS monitoring, IPTV, digital signage, Teams Phone & VoIP
08	Cybersecurity for Hotels	Prevent, Detect & Respond, MDR/SOC, PCI DSS, GDPR alignment
09	Mobile DAS Solutions	Nextivity-powered 4G/5G coverage, eliminating dead zones throughout property
10	Backup & Disaster Recovery	15-min RPO, immutable backups, documented DR runbooks, tested recovery
11	Deep Dive Assessment	RMM platform audit, alert noise reduction, maintenance optimisation
12	Project Services for Hospitality	New openings, migrations, network redesigns, seasonal rollouts
13	On-boarding Process	Nine-step structured on-boarding for single sites and multi-property groups
14	Service Level Agreement (SLA)	Essential / Standard / Premium tiers with defined response times
15	Escalation Process	NOC and Service Desk escalation paths, timeframes, and contacts
16	Security and Compliance	ISO 27001:2022, NIS2, DORA, GDPR, PCI DSS, SOC 2 Type II

17

About CDMA

Established 2011, 56 countries, 6 continents, offices in Nicosia, Dubai & Athens

01

Why Hospitality Needs 24/7 IT Support

Hospitality operates around the clock. A server crash at 2 AM during peak season does not wait for business hours. A Wi-Fi outage in a 300-room resort triggers hundreds of guest complaints within minutes. In hospitality, IT is not back-office — it is the guest experience.

The Hospitality IT Challenge

Always-On Operations	Hotels, resorts, and venues operate 24/7/365. Front desk check-ins happen at midnight. Room service flows through POS systems at 3 AM. Housekeeping relies on mobile devices. Any downtime directly impacts the guest experience and revenue.
Peak Season Pressure	Occupancy surges place enormous strain on networks, PMS systems, and payment processing. Seasonal peaks bring 2–4 devices per guest requiring high-density Wi-Fi. The worst time for an IT failure is precisely when it is most likely to occur.
Complex Vendor Ecosystem	Hospitality IT involves PMS providers (Opera, Mews, Protel), POS systems (Micros, Lightspeed), IPTV, door lock systems, CCTV, and VoIP. Coordinating between them requires deep domain knowledge.
Staff Turnover	Hospitality has one of the highest staff turnover rates of any industry. Seasonal hiring means constant onboarding and offboarding of accounts, devices, and credentials — creating operational overhead and security risk.
Payment & Privacy Compliance	PCI DSS and GDPR are non-negotiable. Guest databases contain PII, payment systems process card transactions continuously, and strict network segmentation must be maintained at all times.
Mobile Coverage Gaps	Thick walls, basements, and large conference areas create signal dead zones that frustrate guests and hinder staff. Comprehensive 4G/5G coverage (DAS) is an increasingly expected amenity.

The bottom line: Hospitality IT demands proactive 24/7 monitoring and rapid incident response. Reactive support is not an option when guest satisfaction and revenue are on the line.

Hospitality Systems We Help Protect

System	Key Platforms	Why It Matters
Property Management System (PMS)	Opera, Mews, Protel, Hotelogix	Reservations, check-in/out, billing, housekeeping — the heart of operations

System	Key Platforms	Why It Matters
Point of Sale (POS)	Micros, Lightspeed, Toast	Restaurant, bar, and room-service transactions. Must be available 24/7
Guest Wi-Fi	Aruba, Cisco Meraki, Ubiquiti	The single most common guest complaint when it fails. Non-negotiable.
VoIP & Telephony	Teams Phone, Cisco, Avaya	Guest-room phones and reception lines. Downtime means missed bookings
Digital Key & Smart Locks	Assa Abloy, Dormakaba	Keyless entry requires constant connectivity between locks and PMS
CCTV & Access Control	Hikvision, Axis, Genetec	Critical for guest safety and regulatory compliance
Booking Engines & OTAs	Booking.com, Expedia, SiteMinder	Real-time inventory sync. A failure can cause overbookings or lost revenue
IPTV & Digital Signage	Samsung LYNK, LG Pro:Centric	In-room entertainment and lobby displays require constant monitoring

02

CDMA Services Overview

CDMA provides a comprehensive suite of managed IT and cybersecurity services structured around three integrated pillars designed specifically for hospitality. All services are delivered white-label — your clients never know we exist.

Three Integrated Pillars

Resilient Infrastructure
SD-WAN with automatic failover, Wi-Fi 6/6E high-density networks, enterprise LAN switching with secure VLAN segmentation, and full isolation of guest, PMS, IoT, and admin networks. Your critical systems are always available and performing optimally.
Secure Operations
24/7 network monitoring and MDR/SOC services, advanced endpoint protection and threat detection, continuous vulnerability management, and automated backup and disaster recovery. Your data, guests, and property are protected around the clock.
Hotel-Grade Productivity
PMS/POS system continuity and monitoring, Teams Phone and VoIP support, IPTV and digital signage management, conference AV, and guest application support. Staff are empowered; guests enjoy superior connectivity.

Key Services at a Glance

Service	What It Does	Primary Hospitality Benefit
NOC (24/7)	Proactive monitoring, maintenance, and remediation of servers, network devices, and endpoints	Guest Wi-Fi uptime, PMS/POS reliability, peak-season readiness
Service Desk (24/7)	First-contact technical support for hotel staff via phone and email (white-label)	Fast resolution, seasonal staff onboarding, minimal guest disruption
Guest Wi-Fi & Captive Portal	Wi-Fi 6/6E high-density wireless, branded portal, PMS integration, analytics	Superior connectivity, conference revenue, marketing data capture
Cybersecurity / MDR	24/7 SOC, EDR, SIEM, next-gen firewall, threat isolation in 15 minutes	Ransomware protection, PCI DSS and GDPR compliance support

Service	What It Does	Primary Hospitality Benefit
Mobile DAS	Nextivity-powered 4G/5G distributed antenna systems	Ubiquitous cellular coverage for guests and staff throughout property
Backup & DR	Immutable backups with 15-min RPO, offsite replication, tested DR runbooks	Rapid recovery from ransomware, hardware failure, or natural disaster
Deep Dive Assessment	RMM platform audit and optimisation, alert tuning for hospitality	Reduced noise, better visibility, hospitality-aligned maintenance windows
Project Services	New openings, SD-WAN, Wi-Fi 6/6E, migrations, network redesigns	On-time delivery, zero guest disruption, documented procedures

03

Hospitality Network Architecture

A properly segmented network protects guest data, ensures PCI compliance, and maintains performance across all property systems simultaneously. CDMA designs, deploys, and manages enterprise-grade network architectures tailored to the specific demands of hospitality operations.

Micro-segmentation principle: A compromised guest device must never be able to reach payment systems or property management infrastructure. This is enforced at the VLAN level — not just firewall rules — for true defence in depth.

Five-Layer Architecture

01 Internet & SD-WAN Layer	Dual-ISP failover with intelligent traffic routing ensures continuous connectivity even during provider outages. LTE/5G backup ensures VoIP reception can always take reservations even during primary internet failures. No single point of failure for connectivity.
02 Core Security & Switching	Next-generation firewall with application awareness and intrusion prevention creates secure network boundaries with deep packet inspection. Managed core switches provide the backbone for all VLAN segregation with centralised management and 24/7 monitoring.
03 VLAN Segmentation	Minimum six isolated VLANs: Guest Wi-Fi, Staff/Administration, PMS/POS (PCI-scoped), CCTV, IPTV, IoT devices, and Management. Payment systems sit in their own PCI-scoped segment with no lateral access from other segments.
04 Access Control & Captive Portal	Branded captive portal with RADIUS authentication. Guests are automatically provisioned access at check-in and removed at check-out via PMS integration. Voucher codes and time-limited access support conference and event guests.
05 Monitoring & Logging (SIEM)	A SIEM platform collects security events, traffic patterns, and system health metrics for 24/7 threat detection. Anomaly detection identifies suspicious behaviour — such as a guest device attempting to reach POS infrastructure — in real time.

What CDMA Deploys in Hospitality Networks

Technology	Details
SD-WAN	Intelligent dual-ISP failover with automatic traffic rerouting and LTE/5G backup
Wi-Fi 6/6E	High-density APs with seamless roaming, per-room bandwidth management, channel optimisation
Enterprise LAN	Managed switching with VLAN tagging, QoS prioritisation for PMS/POS, redundant uplinks
VLAN Segmentation	Six+ isolated segments: Guest, Staff, PMS/POS (PCI), CCTV, IPTV, IoT, Management
Next-Gen Firewall	Deep packet inspection, application awareness, intrusion prevention, web filtering
RADIUS & Captive Portal	Centralised authentication with PMS integration, marketing analytics, voucher codes

04

NOC for Hospitality

Our Network Operations Centre provides 24/7 proactive monitoring, management, and remediation of your hospitality IT infrastructure — keeping guest-facing and back-office systems running without interruption.

How Does It Work?	Why It Matters in Hospitality
We monitor your infrastructure using your existing RMM platform or our own SaaS-based monitoring agents. Our NOC team analyses alerts, takes corrective action, and escalates to you only when necessary. We work within your own RMM instance if you use a supported platform.	A failed firewall at a resort can take down guest Wi-Fi, POS terminals, and door lock controllers simultaneously. Proactive monitoring catches degradation before it becomes a guest-impacting outage. We review your configuration before peak periods so you never have to worry.

What We Monitor in Hospitality

- Guest Wi-Fi access points, controllers, and uptime
 - Firewalls, switches, and core network infrastructure
 - PMS and POS server health and application availability
 - Backup job success, failure, and data integrity
 - Anti-virus and endpoint security status
- VoIP system connectivity and call routing integrity
 - CCTV and access control server health
 - IPTV and digital signage content delivery
 - SD-WAN tunnel status and failover events
 - SIEM alert feeds and security event correlation

Hospitality Incident Examples

Scenario	What CDMA Does	Impact Avoided
Guest Wi-Fi AP fails at 11 PM	Alert received, AP identified, remote restart attempted. Hardware failure confirmed → escalated to vendor with diagnostics.	Guests in affected area restored within minutes, not hours.
PMS server disk at 85% critical	Automated disk cleanup triggered. Root cause analysis performed and capacity plan recommended if persists.	PMS stays online. No check-in/out disruption.
Windows patch pending on POS server	Patch scheduled for agreed 3 AM maintenance window. POS services verified healthy post-reboot.	Patching done outside peak hours. No service interruption.
Firewall CPU at 95% during high season	Traffic analysis performed. Configuration optimisation applied or escalated to vendor.	Network performance maintained during peak occupancy.

Scenario	What CDMA Does	Impact Avoided
Backup job failure on file server	Backup reattempted. If media/hardware issue → escalated with full diagnostic report.	Data protection maintained. Compliance preserved.
SD-WAN failover event detected	Secondary ISP path confirmed active. Primary path diagnostics run. ISP notified if carrier issue.	Continuous internet connectivity. No guest-facing impact.

High-season readiness: Before peak periods, our NOC team reviews your monitoring configuration, confirms maintenance schedules, and ensures alert thresholds are tuned for increased load. We prepare so you do not have to worry.

Coverage Options & Service Tiers

- 24/7/365 — Full around-the-clock monitoring (recommended for hotels and resorts)
- In-hours — Your normal business hours, Monday to Friday
- Out-of-hours — Evenings, weekends, and public holidays
- Hybrid — Mix of coverage types per property within the same group

Workstation Packages

Server Packages

Feature	Feature
Monitoring & notification	Monitoring & notification
Windows & Mac patch management	24/7 or In-hours/OOH coverage
Antivirus management	Automation
24/7 coverage	Remediation & root cause analysis
Remote remediation	Patch management
Third-party application patching	Vendor management
Disk cleanup & health checks	Service requests

NOC Engineer Certifications

Standard Tier	Premium & Consultant Tier
• Microsoft Certified: Azure Fundamentals (AZ-900) • Microsoft 365 Fundamentals (MS-900) • Security, Compliance & Identity (SC-900) • Windows Client (MD-102)	• Azure Administrator (AZ-104) • Azure Security Engineer (AZ-500) • CCNA & CCNP Enterprise (Cisco) • Sophos, Fortinet, VMware, Hyper-V product certs

05

Service Desk for Hospitality Teams

Our Service Desk delivers end-user technical support directly to your hospitality staff — from front desk agents and restaurant managers to housekeeping supervisors. We focus on First Contact Resolution (FCR) to get your people back to serving guests as quickly as possible.

How Does It Work?	Why It Matters in Hospitality
Your authorised staff contact us by phone or email. From their perspective, we are members of your own IT team. We troubleshoot and resolve at first contact where possible, or escalate to our NOC team or your internal resources as needed.	When a front desk agent cannot log in during a rush of check-ins, every minute counts. Hospitality staff are not IT specialists — they need fast, patient support that respects the urgency of guest-facing operations.

What We Support

Category	Examples
Account Management	Password resets (PMS, POS, email), new account setup, access group assignment, offboarding
Onboarding & Offboarding	Active Directory accounts, email provisioning, Wi-Fi credentials, device setup
Hardware & Peripherals	Printer issues at front desk, back office, and kitchen; workstation troubleshooting
Mobile & Email	Email on mobile devices, M365 support, SPAM filter configuration
VoIP & Telephony	Teams Phone, Cisco, Avaya — configuration, troubleshooting, and extension management
Application Support	Pre-approved software installation, PMS/POS first-line support, IPTV queries
Wi-Fi	Staff device connectivity troubleshooting, dead zone reporting, access credential issues

Typical Hospitality Scenarios

• Front desk agent locked out of PMS during peak check-in • Restaurant manager needs POS receipt printer reconnected • New seasonal hire needs full system access set up same day	• Night auditor unable to generate end-of-day reports • General manager needs email configured on new phone • Housekeeping supervisor reports Wi-Fi dead zone on 3rd floor
---	--

Seasonal staffing support: Before high season, we can pre-provision accounts for incoming staff so new hires have system access from day one. We work with your HR and IT teams to ensure a smooth seasonal ramp-up.

06

Guest Wi-Fi & Captive Portal

Guest Wi-Fi quality directly impacts online reviews and repeat bookings. Our high-density wireless design handles hundreds of concurrent devices whilst maintaining performance in every room and public space. The single most common guest complaint when it fails — reliable, segmented, high-capacity Wi-Fi is non-negotiable.

Enterprise-Grade Wireless Design	Wi-Fi 6/6E access points provide higher throughput and lower latency in high-density environments. Seamless roaming ensures guests move through the property without drops. Bandwidth management per room prevents a single heavy user from degrading service for others.
Branded Guest Portal	A customised captive portal delivers a professional, on-brand experience. Features include voucher codes, room-based authentication, and PMS integration for automatic access provisioning at check-in and removal at check-out. No manual account management required.
Network Analytics	Track dwell time, device types, peak usage patterns, and coverage gaps. This data enables network performance optimisation and marketing opportunities, including opt-in marketing consent capture through the portal.
Network Segmentation	Guest Wi-Fi is always isolated from staff, PMS/POS, CCTV, and IoT networks at the VLAN level. A guest device cannot reach payment infrastructure under any circumstances — enforced in hardware, not just firewall rules.

Conference Revenue Impact: Reliable, high-capacity Wi-Fi in meeting spaces directly drives conference bookings and event revenue. Poor connectivity leads to contract penalties and lost repeat business. Our enterprise wireless design ensures conference spaces can support the most demanding events.

Guest Wi-Fi Deliverables

Deliverable	Details
Wireless survey & design	Predictive RF planning and post-installation validation for complete coverage
Wi-Fi 6/6E deployment	High-density APs with seamless roaming, band steering, and load balancing

Deliverable	Details
Captive portal	Branded portal with PMS integration, voucher codes, and social/email login
RADIUS authentication	Secure, centralised auth with per-user and per-room policy enforcement
Bandwidth management	Per-SSID and per-device rate limiting for fair access across all guests
Analytics dashboard	Real-time and historical reporting on usage, coverage, and device counts
24/7 monitoring	AP uptime monitoring with automatic alerting and remote remediation

07

Property Systems Continuity

Your property management and point-of-sale systems are the operational heartbeat of your hotel. Our proactive monitoring ensures they are always available when your staff and guests need them. Continuous health checks, scheduled backups with automated verification, and maintenance windows coordinated with low-occupancy periods minimise guest impact whilst maximising system reliability.

System	What We Monitor & Manage
PMS/POS Monitoring	Health checks on services, databases, and application response for Opera, Mews, Protel, Micros, and Lightspeed. Backup verification and maintenance windows during low-occupancy periods.
IPTV & Digital Signage	Content distribution monitoring, channel availability checks, and rapid response to guest complaints. Health checks for Samsung LYNK, LG Pro:Centric, and lobby display systems.
Teams Phone & VoIP	Call routing integrity for front desk and internal comms. LTE/5G failover ensures reception can always take reservations even during primary internet outages.
Booking Engines & Channel Managers	Connectivity monitoring between PMS and OTAs (Booking.com, Expedia, SiteMinder). Alerts when real-time inventory synchronisation fails, preventing overbookings.
Digital Key & Smart Locks	Connectivity monitoring between lock controllers, gateways, and PMS. Alert escalation for lock communication failures that could prevent guest room access.
Back-Office Systems	Finance, payroll, HR, and procurement system availability. Integration health checks between back-office platforms and PMS. Backup verification for critical business data.

Front Desk Never Down: Our architecture includes LTE/5G failover for VoIP systems, ensuring reception can always take reservations and assist guests even during primary internet outages.

08

Cybersecurity for Hotels

Hotels are prime targets for cyberattacks. Guest databases contain PII, payment systems process card transactions continuously, and high staff turnover creates access control challenges. GDPR, PCI DSS, and data protection are fundamental to maintaining guest trust and regulatory compliance.

Prevent	Detect & Respond
• Next-generation firewall with application awareness and intrusion prevention • Endpoint detection & response (EDR) on all workstations and servers • Advanced email security — phishing, malware, and BEC filtering • Web content filtering and DNS security • Privileged access management (PAM) for admin accounts • MFA enforced on all remote access and admin tools • AES-256 encrypted remote sessions for all CDMA engineers • Regular security patching within hospitality-safe windows	• 24/7 managed detection & response (MDR) with dedicated SOC • SIEM collecting events from all devices, endpoints, and servers • Specific playbooks for ransomware, POS skimmers & phishing • Threat isolation within 15 minutes for Priority 1 incidents • Forensic investigation and root cause analysis • GDPR breach notification procedure support (72-hour reporting) • External SOC monitoring with continuous threat intelligence feeds

PCI DSS & GDPR Alignment

Framework	Status	Key Controls Implemented
PCI DSS	Awareness & implementation support	POS/payment VLAN isolated, TLS 1.2+ encryption, access controls, quarterly vulnerability scans
GDPR	Compliant	EU-server storage, SOC 2 Type II certified ticketing, 72-hour breach notification, data minimisation
ISO 27001:2022	Certified	Full ISMS covering all CDMA operational processes and systems
NIS2	Compliant	Network and Information Systems directive — operational security controls
DORA	Compliant	Digital Operational Resilience Act — DR testing, incident reporting
SOC 2 Type II	Certified (CRM/ticketing)	Trust Service Criteria for security and availability

Hospitality security best practice: We recommend separate VLANs for guest Wi-Fi, staff, POS, CCTV, and IoT; MFA on all administrative access; and regular credential rotation — especially at seasonal changeover when departing staff accounts must be immediately disabled.

09

Mobile DAS Solutions

Ensuring ubiquitous 4G/5G coverage throughout your property — from basement car parks to top-floor suites. Our Nextivity-powered Distributed Antenna Systems (DAS) eliminate dead zones, enhancing both guest satisfaction and operational efficiency.

Benefit	Details
Guaranteed Coverage	Blanket 4G/5G signal in every corner — basements, thick-walled rooms, expansive conference centres, and outdoor terraces. Guests experience uninterrupted personal mobile connectivity throughout their stay.
Superior Guest Experience	Guests enjoy reliable calls, streaming, and apps over cellular, reducing reliance on Wi-Fi and improving satisfaction scores. Mobile coverage quality is increasingly mentioned in online reviews.
Enhanced Operations	Seamless mobile communication for housekeeping, maintenance, security, and front of house — enabling faster response times for maintenance requests and emergency coordination.
Conference & Events Revenue	Conference organisers require guaranteed cellular connectivity for presenters, exhibitors, and delegates. Reliable DAS is a competitive differentiator when selling conference and event space.
Reduced Wi-Fi Load	Strong cellular signal means guests make calls and use mobile data over cellular rather than Wi-Fi — reducing wireless network load and improving Wi-Fi performance for data-intensive applications.
Future-Proof Technology	Nextivity solutions support current and emerging 4G/5G bands (Band 3, 7, 20, and 5G n78), covering all major EU carriers. Your investment remains relevant as mobile technology evolves.

Deployment Process

Step	Activity	Description
1	RF Site Survey	Walk-test to identify signal dead zones and measure current signal strength from all relevant carriers
2	Coverage Design	System design specifying antenna locations, cable routes, and head-end equipment for target coverage
3	Carrier Approval	Nextivity systems are carrier-approved, avoiding interference and ensuring regulatory compliance

Step	Activity	Description
4	Installation	Professional installation by certified engineers with minimal disruption to hotel operations
5	Validation	Post-installation walk-test to confirm all coverage targets are met throughout the property
6	Monitoring	Remote system health monitoring to detect and address faults before they impact guests or staff

10

Backup & Disaster Recovery

System failures, ransomware attacks, or natural disasters should not cripple your property. Our backup and disaster recovery strategy ensures rapid restoration of critical systems with minimal data loss.

Cost-Benefit Reality: A one-hour PMS outage during high season costs thousands in lost bookings and chargebacks. Our DR investment typically pays for itself after preventing just one significant incident.

DR Capability	Details
Comprehensive backup coverage	Server, database, and PMS backups with 15-minute RPO (configurable). Daily automated offsite replication to geographically separate storage. All PMS databases and POS transaction logs included.
Immutable backup protection	Backup copies stored in immutable format preventing ransomware encryption. Immutability enforced at the storage layer — even admin access cannot delete or encrypt these copies.
Quarterly restore tests	Formal recovery tests validate that RTOs are achievable and procedures remain current. Test results documented and shared with you as part of service reporting.
Documented DR runbook	Defines specific RTOs for PMS, POS, VoIP, and Wi-Fi controller systems. Clear escalation paths and tested procedures reduce stress during actual incidents.
Offsite replication	Critical data replicated to geographically separate storage. Cross-site replication between your properties available for multi-property groups. All replication encrypted with AES-256.

Recovery Objectives by System

System	RPO (Max Data Loss)	RTO (Recovery Time)
PMS Server	15 minutes	< 4 hours
POS Server	15 minutes	< 2 hours
File Server	1 hour	< 4 hours
Email (M365)	Platform SLA	Platform SLA
Wi-Fi Controller	24 hours (config backup)	< 1 hour
Firewall	24 hours (config backup)	< 2 hours

System	RPO (Max Data Loss)	RTO (Recovery Time)
Domain Controller	1 hour	< 4 hours

11

Deep Dive Assessment

A unique audit and optimisation service for your RMM platform, designed to ensure your monitoring is tuned for the specific demands of hospitality environments. Fixed-cost assessment, prioritised recommendations, no surprises.

Assessment Area	What We Review	Hospitality Focus
Alert & Noise Reduction	Alert thresholds, filters, policies, and dashboard configuration	Are transient guest devices excluded from workstation-level alert policies?
Maintenance Windows	Patch schedules, backup timing, and planned task scheduling	Do windows avoid peak check-in, breakfast, and dinner hours (typically 2–5 AM)?
Visibility & Dashboards	Dashboard layout, property-level grouping, and health views	Can you see per-property health at a glance across your entire portfolio?
Deployment & Coverage	Agent deployment, network node coverage, and device class accuracy	Are PMS/POS servers prioritised correctly in alert severity?
Security Posture	Security monitoring config, backup management, and patch compliance	Are seasonal capacity changes accounted for in monitoring thresholds?

12

Project Services for Hospitality

From new hotel openings to network redesigns, our project team delivers specialist hospitality IT projects on time and on budget. Most projects are delivered out-of-hours to minimise disruption to guests and operations.

Project Type	Scope	Typical Deliverables
New Property Opening	Full IT setup for new hotels, resorts, or venue openings	Network infrastructure, server deployment, workstation rollout, PMS/POS install, systems integration
Network Redesign	Guest Wi-Fi overhaul, VLAN segmentation, firewall replacement, SD-WAN	Wi-Fi 6/6E, guest/staff/CCTV/POS/IoT VLAN isolation, DAS for dead zones
Cloud Migration	Microsoft 365, Active Directory restructuring, file server migration	Email migration, Azure AD, SharePoint/OneDrive, hybrid identity configuration
Security Hardening	Firewall replacement, VLAN segmentation, MFA rollout, EDR deployment	Zero-trust network access, EDR on all endpoints, PAM for admin accounts
Server Infrastructure	Windows Server 2022 deployment, virtualisation, backup implementation	Hyper-V/VMware deployment, DR configuration, backup validation
Seasonal Rollout	Endpoint rollout for seasonal staff, account pre-provisioning	Laptops/tablets configured, AD accounts, M365 licences, Wi-Fi credentials

Risk-Free Delivery: Our project management methodology ensures clear milestones, defined scope, and no surprises. We co-ordinate with PMS vendors, ISPs, and hardware suppliers on your behalf to keep projects on track.

13

On-boarding Process

On-boarding enables us to understand your hospitality environment in detail and gather everything needed to deliver our services successfully — from property layouts and vendor contacts to escalation procedures and maintenance preferences.

A simple property on-boarding can be achieved in days. For multi-site hotel groups, we recommend a phased approach — starting with the flagship property and rolling out to additional sites over subsequent weeks.

Nine-Step On-boarding Process

Step	Owner	Activity
1	You	Contact our sales team. Share property requirements and initial technical overview.
2	Both	Initial discovery call. Book detailed on-boarding session. Finalise commercial terms.
3	Both	Agree live service parameters, coverage levels, and SLA tier per property.
4	CDMA	Issue contract with agreed on-boarding timeframe and all service details.
5	You	Sign contract and pay on-boarding fee to commence on-boarding.
6	You	Provide access to platforms and vendors. Share environment documentation.
7	Both	On-boarding call: knowledge transfer, property walkthrough, vendor contact collection.
8	CDMA	System setup: monitoring config, agent deployment, dashboard build, runbook creation.
9	Both	System test, go live, ongoing reporting and regular review meetings commence.

What We Discuss During On-boarding

Topic Area	Information Gathered
Property Details	Organisation structure, property locations, types (hotel/resort/apartments), occupancy patterns
Technical Environment	RMM platform, PSA software, network diagrams, asset inventories, vendor support contracts
Key Systems	PMS, POS, Wi-Fi architecture, VoIP setup, door locks, CCTV, IPTV, booking engine

Topic Area	Information Gathered
Vendor Contacts	PMS vendor, ISP, hardware suppliers, specialist contractors — all captured for escalation
Service Configuration	Coverage hours per property, escalation contacts, maintenance window preferences
Operational Rhythms	Check-in/out peak times, high-season dates, blackout periods for changes
Known Issues	Recurring problems, historical incidents, areas of concern to address in monitoring setup

14

Service Level Agreement (SLA)

We offer a comprehensive SLA with three tiers designed to match the operational requirements and budget of different property types. All tiers include proactive monitoring, security management, and expert hospitality IT support.

Service Tier Comparison

Service Element	Essential	Standard	Premium
Coverage Hours	8×5 (Business Hours)	12×5 (Extended Days)	24×7×365 (Always On)
P1 Remote Response	15 minutes	15 minutes	15 minutes
P2 Remote Response	1 hour	1 hour	30 minutes
P3 Remote Response	4 hours	4 hours	2 hours
Onsite (Metro Areas)	By agreement	P1: 4 hours	P1: 2 hours
Service Desk Languages	English & Greek	English & Greek	English & Greek
Account Reviews	Annually	Quarterly	Monthly
DR Testing	Annual	Annual	Semi-annual
MDR/SOC Included	Add-on	Add-on	Included

Priority Definitions for Hospitality

Priority	Definition	Hospitality Example
High (P1)	Multiple systems or users affected; guest-facing services impacted	PMS server down, guest Wi-Fi outage across property, firewall offline
Medium (P2)	Single system or user moderately affected; some operational impact	Single POS terminal offline, email access issue for manager
Low (P3)	Minor issue; no guest impact	Non-urgent software update, printer configuration change
Service Request	Planned change or information request	New user account creation, device procurement advice

15

Escalation Process

Our goal is to resolve issues within the stated SLA, or escalate back to you with full context so your team can take immediate action. Ticket ownership always remains with the originating engineer for full accountability.

When We Escalate (NOC)

- The issue involves a system, network, or service we cannot access
- The issue involves a system we do not support (e.g. PMS application-level bugs)
- The issue involves a non-supported third-party vendor
- The issue cannot be resolved within the escalation timeframe

NOC Escalation Timeframes

Priority	Escalation Timeframe	Escalation Point	Notification Method
High (P1)	Within 2 hours	Your technical contact	Phone call + ticket update
Medium (P2)	Within 4 hours	Your technical contact	Ticket notification
Low (P3)	Within 16 hours	Your technical contact	Ticket notification

Service Desk Escalation

Priority	Escalation Point	Notification Method
High (P1)	Your technical contact	Phone call + ticket update
Medium (P2)	Your technical contact	Ticket notification
Low (P3)	Your technical contact	Ticket notification

Internal escalation: We escalate tickets internally to specialist teams (network, Windows, Mac, security) as required. The originating engineer retains ticket ownership throughout for full accountability and continuity.

16

Security and Compliance

Hospitality organisations handle sensitive guest data every day — passport details, payment card information, personal preferences, and travel patterns. We are committed to ensuring security is maintained across all aspects of our operation.

Security Area	Controls & Measures
Human Resources	Employment history verification, ID checks, professional qualifications verification, minimum 2 verified references, clean criminal record checks, NDAs for every employee
Physical Security	Access control at all facilities, CCTV with night vision, 24/7 UPS and backup generator, redundant internet connectivity at all office locations
Infrastructure Security	Principle of least-access for all systems, MFA on all tools and remote access, AES-256 encrypted remote sessions, external SOC monitoring, ITIL best-practice operations
Redundancy & Availability	24/7 backup generator and UPS, redundant internet connectivity, cloud-based SaaS/IaaS for critical systems, documented business continuity and disaster recovery plan
Guest & Customer Data	SOC 2 Type II certified CRM and ticketing, secure credential storage, all data on EU servers (GDPR), strict PII handling procedures aligned to GDPR requirements
Certifications	ISO 27001:2022 certified, NIS2 compliant, DORA compliant, GDPR compliant, PCI DSS awareness and implementation support

About CDMA

Providing exceptional service to our partners' clients is our number one priority. CDMA has been providing specialist IT support since 2011, first as an MSP and now as a trusted partner to MSPs on an international basis. We operate from Nicosia, Cyprus with offices in Dubai and Athens.

Since 2011 In operation	56 Countries End-customers served	6 Continents Global coverage	24/7/365 Support availability
---	--	---	---

Why CDMA for Hospitality?

Differentiator	Details
Established Since 2011	Over a decade of experience delivering NOC, Service Desk, cybersecurity, and project services for MSPs worldwide. We understand the demands of always-on service delivery.
International Coverage	56 countries and 6 continents served — including hotels, resorts, and hospitality venues. Experienced with the regulatory and operational requirements of international hotel groups.
24/7 Support	NOC, Service Desk, and MDR/SOC operate around the clock, 365 days a year — matching the operational rhythm of hospitality. No shift gaps; no out-of-hours surcharges for Premium tier.
White-Label Delivery	We operate as a seamless extension of your team. Your guests and staff never know we exist. Your brand, your relationships, our expertise.
ISO 27001:2022 Certified	Structured service delivery with ITIL best-practice operations, clear SLAs, and defined escalation procedures. No ambiguity, no surprises.
Hospitality Expertise	Our runbooks, alert policies, maintenance windows, and escalation procedures are all tuned for hospitality. We speak PMS, POS, IPTV, and guest connectivity — not just IT.

CDMA Hospitality Service Summary

Service	What It Does	Hospitality Benefit
NOC (24/7)	Proactive monitoring, maintenance & remediation of all infrastructure	Guest Wi-Fi uptime, PMS/POS reliability, peak-season readiness
Service Desk (24/7)	White-label first-contact technical support for hotel staff	Fast resolution, seasonal onboarding, minimal guest disruption
Guest Wi-Fi & Captive Portal	Wi-Fi 6/6E design, branded portal, PMS integration, analytics	Superior connectivity, conference revenue, marketing data
Property Systems Continuity	PMS/POS, IPTV, digital signage, VoIP monitoring & management	Zero downtime for guest-facing operations, VoIP LTE/5G failover
Cybersecurity / MDR	24/7 SOC, EDR, SIEM, NGFW, threat isolation in 15 minutes	Ransomware protection, PCI DSS & GDPR compliance support
Mobile DAS	Nextivity-powered 4G/5G distributed antenna systems	Ubiquitous cellular coverage for guests and staff throughout property
Backup & DR	15-min RPO, immutable backups, offsite replication, tested DR runbooks	Rapid recovery from any incident, compliance & data protection
Deep Dive Assessment	RMM platform audit & optimisation tuned for hospitality	Reduced alert noise, better visibility, hospitality-aligned maintenance
Project Services	New openings, SD-WAN, Wi-Fi 6/6E, migrations, network redesigns	On-time delivery, zero guest disruption, documented procedures
On-boarding	Nine-step structured setup for new properties and clients	Smooth handover, property-specific knowledge transfer, rapid go-live

A comprehensive guide to maintaining brand consistency across all touchpoints.

01 - Logo

Primary Logo

Clear Space

Maintain minimum clear space equal to the height of the "C" in CDMA around all sides of the logo.

Minimum Size

The logo should never be reproduced smaller than 120px wide for digital or 30mm for print.

Placement

Always place the logo on clean backgrounds. Avoid busy imagery or patterns behind the mark.

02 - Minimum Size

Minimum size of Logo

To ensure legibility and brand integrity, the logo must never be reproduced below the minimum sizes specified below.

Digital — Minimum 120px wide

Print — Minimum 30mm wide

Favicon

Use the simplified icon mark at sizes below 32×32px. The full wordmark should not be used.

Social Avatars

For profile images and avatars (≤ 48 px), use the icon mark only to maintain clarity.

Merchandise

On physical items, the logo width must be at least 30mm to ensure readability on any material.

03 - Do's & Don'ts

Logo Usage

✓ Do

- Use the logo on solid backgrounds with sufficient contrast
- Maintain the proper clear space around the logo
- Use approved color variations only
- Scale proportionally when resizing

✗ Don't

- Stretch, rotate, or distort the logo in any way
- Change the logo colors outside approved palette
- Place the logo on busy or low-contrast backgrounds
- Add effects such as shadows, outlines, or gradients

Color Palette

Cyan Hex Code #00e1fc CMYK 100, 10, 0, 0 RGB 0, 229, 255	Navy Hex Code #053a75 CMYK 100, 86, 28, 13 RGB 5, 58, 117	Hex Code #F0F3F5 CMYK 2, 1, 0, 4 RGB 240, 243, 245	Light
		RGB 0, 0, 0 CMYK 0, 0, 0, 100 Hex Code #000000	Black

05 - Colors

Color Usage

Primary Navy

Used for headers, primary text, and key brand elements. This is the dominant brand color.

Accent Cyan

Reserved for highlights, CTAs, accents, and interactive elements. Use sparingly for maximum impact.
