The Headline

HolaPrime is the **smallest brand by volume** but the **most efficient, fastest-growing, and cleanest by sentiment** in the entire competitive set. The data tells a clear story: this isn't a brand with problems — it's a brand that **hasn't been amplified yet**.

Competitive Market Snapshot

BRAND	MENTIONS	SOV	REACH	REACH/MENTION	MOM MENTIONS	MOM REACH	SENTIMENT
FTMO 🏆	7,149	35.4%	15.9M	2,225	+8.8%	+27.1%	Mixed
Topstep 🥈	5,001	24.8%	11.4M	2,280	+94.1%	+193.1%	26.1% negative ⚠️
fundednext 🥉	4,861	24.1%	9.4M	1,934	+28.6%	+18.6%	Moderate
E8 Markets	2,561	12.7%	1.4M	562	+141.9%	+140.4%	Low quality reach
holaprime ⭐	334	1.7%	863K	2,583 🏆	+115.1%	+1,143.8%	41.9% positive

Context: Top 3 players control 84.3% of all online conversations in the prop firm space. The remaining 15.7% is fragmented — and HolaPrime is the fastest-growing brand in that window. The volume gap is real. The quality gap is not.

5 Strategic Insights

What the data is actually telling us — beyond the surface numbers.

01

Reach Efficiency is the Real Moat

HolaPrime generates **2,583 impressions per mention** — #1 in the industry. That's 16% better than FTMO, 16.5% better than Topstep, and **4.6x better than E8 Markets**. Every new mention you generate has more impact than the same mention would have for any competitor. The machine works — it just needs more fuel.

02

Single Influencer Risk — and Proof of Model

reeyah_sa on X (182,500 followers) generated 273,800 reach from just 30 mentions — **49.5% of HolaPrime's entire reach**. That's a dangerous single point of failure. But it also proves the model: one right partnership = exponential returns. Finding 3–4 more reeyah_sa-tier accounts is the single highest-leverage move available right now.

03

Topstep is in Crisis — Their Audience is Up for Grabs

Topstep hit **120 negative mentions in a single day (Feb 7)** and sustained 50–80 daily through mid-February. That's a 26.1% negative sentiment rate. Traders publicly burning a competitor are actively looking for alternatives. HolaPrime's near-zero negative rate makes it the **obvious landing pad — if it shows up in those conversations**.

04

The Week 4–5 Spike is the Proof of Concept

Reach jumped from **43,600 to 306,800 in one week** — a 603% spike. Something triggered this (influencer activation, viral content, press hit). Understanding exactly what caused it and **systematically replicating it** is more important than any long-term strategy document right now.

05

E8 Markets is the Beatable Near-Term Target

E8 has 12.7% mention SOV but only **3.7% reach SOV** — their content doesn't travel. They're loud but inefficient. HolaPrime already punches above its weight on reach despite a fraction of their mentions. Close the mention gap with E8 and the reach gap closes automatically — and more.

Competitive Opportunity Map

Topstep's Churning Traders — Immediate Window

Traders leaving Topstep after its crisis will pick a replacement within 4–6 weeks. HolaPrime needs to appear in those conversations NOW. This window is time-limited.

Influencer Expansion — High Leverage, Low Risk

Proven model from reeyah_sa. Each additional creator in the 50K–250K follower range (trading/fintech niche) could add 100K–300K impressions per active month.

Viral Spike Reverse-Engineering

Week 4–5 surge from 43,600 → 306,800 reach. Identify every post and share from that window. Build a repeatable activation playbook from the data that already exists.

90-Day Priorities

Five sequenced priorities with clear executorial direction. Weeks 1–12.

1 Scale the Influencer Layer — Weeks 1–4

- Audit exactly what reeyah_sa posted that drove 273,800 reach — replicate the format and angle across other creators
- Source 4–6 additional X (Twitter) creators in the **50K–250K follower range** in trading, funded trader, and fintech niches
- Allocate 60–70% of influencer budget to X — this is where HolaPrime's reach efficiency lives
- Target specifically: trading coaches, "I got funded" showcase accounts, prop firm review channels
- If Karl-Anthony Towns is a brand ambassador — **activate him immediately**. A single post at his follower level is worth more than a month of micro-content

2 Infiltrate Topstep's Negative Conversations — Weeks 1–6

- Set up **real-time monitoring** of Topstep brand mentions across X, Reddit, YouTube comments
- When traders post negative Topstep content — the HolaPrime community/team should be present. Not spamming: *helpfully present*
- Create SEO-targeted comparison content: "HolaPrime vs Topstep" — capture traders actively researching alternatives
- Run **paid retargeting** to traffic visiting Topstep negative review threads and Reddit threads
- This window is time-limited — churning traders pick a new prop firm within 4–6 weeks of going negative

3 Crack the Viral Week Blueprint — Weeks 2–5

- Internal team interview: what happened during Week 4–5? Every post, activation, and event
- Pull every mention and share from the surge window and map the chain of amplification
- Build a documented **"Activation Playbook"** — who shared what, in what order, at what time
- Run 2–3 deliberate replication attempts in the next 60 days using the identified pattern
- The spike wasn't random — there's a repeatable formula inside it

4 3x Mention Velocity Without Sacrificing Quality — Weeks 3–8

- Target: **334 → ~1,000+ mentions/month** within 90 days
- Don't buy volume. Build it through: payout screenshots/videos, funded trader spotlights, UGC testimonials
- Create a **Funded Trader Program** — incentivize successful traders to post their results with HolaPrime branding
- Weekly content cadence minimum: 3 trader stories + 2 educational posts + 1 brand statement post
- Maintain reach/mention ratio above 2,500 — quality doesn't drop for scale

5 Protect the Sentiment Lead — Ongoing

- 41.9% positive / 0.4% negative is extraordinary and the primary brand moat. **Protect it above all else.**
- Establish a 2-hour response protocol for any negative mention — before it compounds

- Actively collect and publish funded trader success stories — positive UGC is the immune system against future negativity
- Sentiment advantage compounds: high positive → more sharing → more reach → more positive mentions → repeat
- Monitor Topstep: their 120-mention negative spike on Feb 7 is a warning of what to prevent at HolaPrime

What Not to Do

The data tells us what to avoid as clearly as it tells us what to pursue.

✓ DO THIS

- Fight on **reach efficiency**, not raw volume
- Move fast on Topstep's crisis — it's time-limited
- Diversify influencer base to reduce single-account dependency
- Make the viral week spike **repeatable**, not a one-off
- Publish real trader results as the primary content engine
- Activate high-profile brand ambassadors (KAT if available)
- Monitor sentiment daily — protect the 0.4% negative rate

✗ DON'T DO THIS

- Don't try to outspend FTMO on volume — you'll lose
- Don't let the Topstep opportunity pass while planning
- Don't leave reeyah_sa as the only influencer pillar
- Don't mistake the reach spike for a solved baseline
- Don't sacrifice sentiment quality for mention quantity
- Don't copy E8 Markets' approach — they're volume with no reach
- Don't ignore the weekly data — monitor this monthly minimum

HolaPrime's Positioning Thesis

The data reveals a clear and defensible strategic position for HolaPrime: **the premium, trustworthy prop firm for serious traders.**

The evidence supporting this positioning:

- **Best-in-class sentiment (41.9% positive)** — traders who engage with HolaPrime leave positive impressions, unlike Topstep (26.1% negative) or fundednext (mixed)
- **#1 reach efficiency (2,583/mention)** — content resonates more, gets shared more, and reaches higher-quality audiences than any competitor
- **Zero tolerance for negative moments (0.4% negative)** — the brand has no crisis events in this period; that's an earned reputation signal
- **Explosive trajectory (+1,143% reach)** — early-stage growth momentum that, properly amplified, compounds quickly

Positioning statement: "HolaPrime isn't trying to be louder than FTMO. It's building the kind of brand that serious traders trust — and serious traders talk about. The numbers prove it already. The goal for the next 90 days is to *amplify* that signal, not change it."

90-Day North Star Metric

Reach per mention stays **above 2,500** **AND** total monthly reach crosses **2,000,000**

This means: maintaining quality efficiency (the current edge) while 2.3x-ing the absolute reach volume.
Achievable within 90 days with focused influencer expansion + systematic activation of the Topstep churn opportunity.

One-Page Summary

HolaPrime holds **#1 reach efficiency, #1 positive sentiment, and #1 reach growth rate** in its competitive set — while sitting at 1.7% share of voice. The asset base is proven. What's missing is amplification scale. The next 90 days are about turning a high-quality signal into a high-volume signal, without compromising the quality that makes it work.

PRIORITY	ACTION	TIMELINE	EXPECTED IMPACT
P1	Influencer Layer Expansion — Source 4–6 X creators (50K–250K followers)	Weeks 1–4	+400–800K reach/month
P2	Topstep Crisis Intercept — Monitor, engage, and retarget churning Topstep traders	Weeks 1–6	New customer pipeline + share gain
P3	Viral Spike Blueprint — Reverse-engineer Week 4–5 and replicate it	Weeks 2–5	Repeatable 300K+ reach events
P4	Mention Volume 3x — Trader UGC, payout clips, funded spotlights	Weeks 3–8	334 → 1,000+ mentions/month
P5	Sentiment Protection — 2-hr response protocol, UGC flywheel	Ongoing	Maintain <5% negative rate

Why This Matters — The Compounding Effect

HolaPrime's advantage isn't one metric. It's a compounding loop:

High positive sentiment → more organic sharing → **higher reach per mention** → content reaches better-fit audiences → **more positive sentiment** → repeat

Breaking into this loop is the goal. The loop already exists. It needs scale.

Every action in the 90-day plan feeds this loop. Influencer expansion adds fuel. Topstep intercepts bring in pre-qualified, motivated switchers. The viral playbook creates repeatable spikes. UGC programs sustain positive sentiment. The result: a brand that grows efficiently rather than expensively.
