

[COMPANY NAME] · Performance Acquisition Audit

Prepared by Growth-onomics

PREPARED BY	DATE	VERTICAL	SCOPE
Growth-onomics	[DATE]	[iGaming / Forex / Fintech]	Google · Meta · Attribution · CRO · Compliance

What this is: A quick diagnostic of your current paid acquisition setup based on what's publicly observable. Not an exhaustive audit — a first look that surfaces where the biggest opportunities are likely sitting. We do this before a first call because it makes the conversation more useful for both sides.

SECTION 1 · CAMPAIGN ARCHITECTURE

Account Structure

WHAT WE LOOKED AT	WHAT WE FOUND	WHAT GOOD LOOKS LIKE
Campaign segmentation	[Brand separate / Mixed]	Brand isolated from performance campaigns
Match type strategy	[Broad-heavy / Phrase+Exact / Mixed]	Phrase + Exact dominant, Broad for discovery only
Negative keyword coverage	[Present / Partial / Missing]	Comprehensive list, updated monthly
Audience layering	[None / Basic / Advanced]	In-market + custom intent stacked

WHAT STANDS OUT

[INSERT: One clear structural issue in plain language — e.g. "Brand and non-brand campaigns appear to be running from the same budget pool, which means non-brand keywords are competing with your own brand terms for spend."]

Bidding

WHAT WE LOOKED AT	CURRENT SETUP	WHAT WE'D RECOMMEND
Bid strategy	[Manual / Target CPA / Max Conv]	Target CPA once conversion volume supports it
Conversion window	[X days]	Matched to average time-to-first-deposit

Primary conversion event	[Registration / FTD / Both]	FTD as primary, registration as micro-conversion
--------------------------	-----------------------------	--

WHAT STANDS OUT

[INSERT: e.g. "Optimising toward registrations rather than FTDs means the algorithm is learning from a conversion event that doesn't correlate with revenue."]

SECTION 2 · CREATIVE & LANDING PAGE

Ad Copy

SIGNAL	WHAT WE OBSERVED
Main value proposition	[Clear / Generic / Multiple competing messages]
Platform compliance	[Compliant / Risks present in [market]]
CTA variety	[Single / Multiple variants tested]
Localisation	[Present / Absent for [market]]

WHAT WE'D TEST FIRST

[INSERT: One specific test — e.g. "Leading with a deposit bonus vs leading with a platform USP. The current creative does both at once, which dilutes both messages."]

Landing Page

CHECK	RATING (1–5)	NOTES
Ad-to-page message match	[X]	[Do the ad and page say the same thing?]
Mobile load speed	[X]	Target: under 2.5 seconds
Registration form friction	[X]	[Number of fields, number of steps]
Trust signals	[X]	[Licence badges, reviews, security marks]
Compliance disclaimers	[X]	[Required placement for regulated markets]

WHAT STANDS OUT

[INSERT: Most impactful fix — e.g. "The registration form has 7 fields on mobile. Industry benchmark for regulated iGaming is 3–4 fields at step one, with progressive disclosure after."]

SECTION 3 · TRACKING & ATTRIBUTION

Is the Right Data Being Collected?

CHECK	STATUS
Conversion tag firing correctly	 / 
First-party data collection active	 / 
GA4 linked to Google Ads	 / 
Server-side tracking in place	 / 
FTD tracked as primary conversion	 / 
Registration tracked as micro-conversion	 / 

WHAT STANDS OUT

[INSERT: e.g. "No server-side tracking means iOS14+ conversions are under-reported by an estimated 20–30%, causing the algorithm to under-bid on mobile."]

Attribution Model

DIMENSION	CURRENT	WHAT WE'D RECOMMEND
Attribution model	[Last click / Data-driven / Linear]	Data-driven
Click window	[X days]	30 days
View window	[X days]	7 days
Cross-channel view	[Yes / No]	Unified dashboard across all paid channels

SECTION 4 · COMPLIANCE (REGULATED MARKETS)

MARKET	STATUS	RISK LEVEL
[UK / FCA]	[Compliant / Partial / At Risk]	[Low / Medium / High]
[DE / GGL]	[Compliant / Partial / At Risk]	[Low / Medium / High]
[NL / KSA]	[Compliant / Partial / At Risk]	[Low / Medium / High]

WHAT WE FOUND

[INSERT: e.g. "UK-facing ad copy includes a bonus reference without a qualifying terms link — a UKGC CAP Code breach. This likely causes intermittent disapprovals and restricts impression volume on high-intent terms."]

WHAT THIS COSTS IF UNADDRESSED

Campaign disapprovals reduce impression share on your most valuable keywords. In regulated Forex and iGaming, compliance-related impression loss typically runs 15–30% of total eligible volume.

SECTION 5 · PRIORITISED RECOMMENDATIONS

PRIORITY	WHAT TO DO	EXPECTED IMPACT	EFFORT
 1	[Action]	[CAC / ROAS / CVR impact]	Low / Med / High
 2	[Action]	[Impact]	Low / Med / High
 3	[Action]	[Impact]	Low / Med / High
 4	[Action]	[Impact]	Low / Med / High
 5	[Action]	[Impact]	Low / Med / High

SECTION 6 · ESTIMATED OPPORTUNITY

Based on current observable setup and Growth-onomics benchmarks across comparable accounts in this vertical.

METRIC	CURRENT (EST.)	WHAT'S ACHIEVABLE	CHANGE
Customer Acquisition Cost	€[X]	€[X]	-[X]%
ROAS	[X]%	[X]%	+ [X]%
Registration Conversion Rate	[X]%	[X]%	+ [X]%
FTD Conversion Rate	[X]%	[X]%	+ [X]%

WHAT A FULL AUDIT COVERS

If this diagnostic raises questions worth exploring, a full Performance Audit goes deeper:

- Complete account access review
- 12-month historical data analysis
- CLV modelling by acquisition channel
- Compliance matrix build for each active market
- Budget reallocation recommendation with 90-day roadmap

Timeline: 3–4 weeks · **Output:** A concrete roadmap, not a report that sits in a folder
